

Day 9

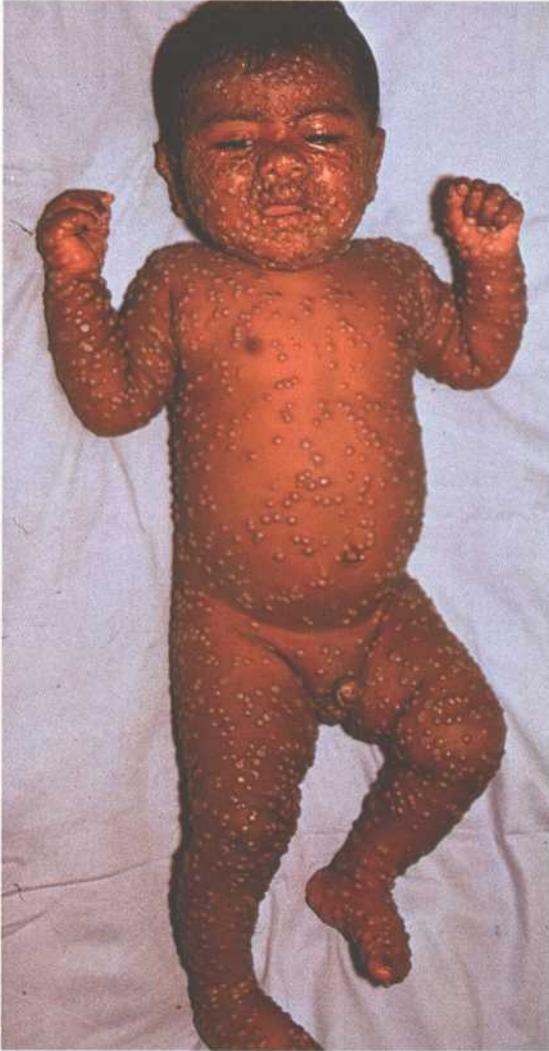

Plate I.12. Ninth day of rash. The pustules have reached their maximum size and are becoming flattened.

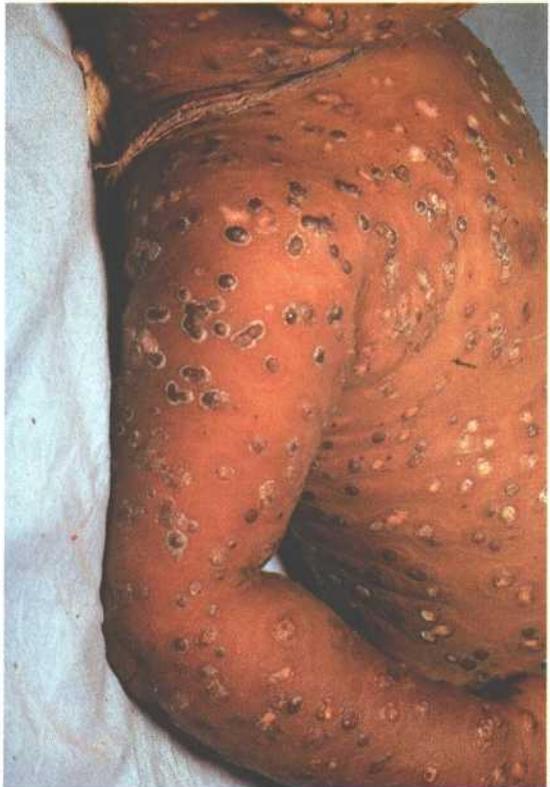

Day 13

Plate I.13. Thirteenth day of rash. The lesions are now scabbing, but the eyelids are more swollen than at earlier times. There is no evidence of secondary bacterial infection of the skin lesions.

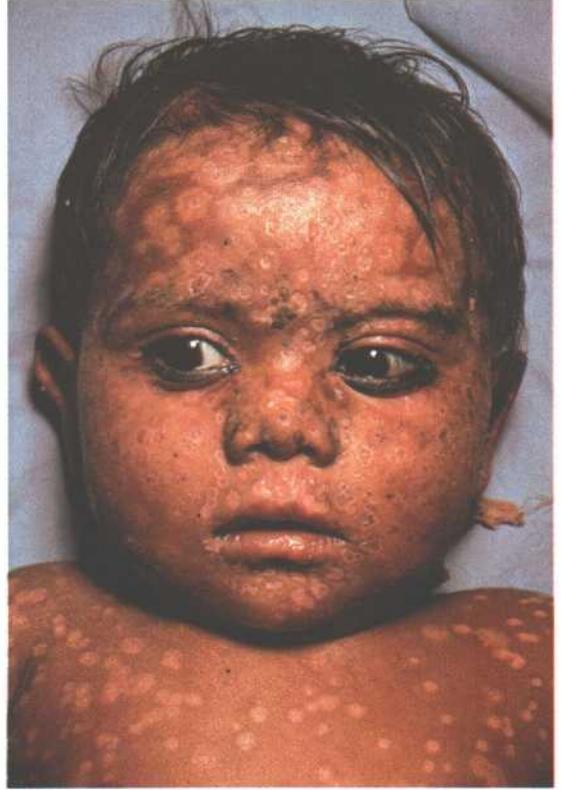

Day 20

Plate I.14. Twentieth day of rash. The scabs have separated except on the palms of the hands and the soles of the feet, leaving depigmented areas.
