
Introduction

When the Supreme Court announced its unanimous verdict in Pegram v. Herdrich3, a case concerning the rights of a plaintiff to sue an HMO4 in federal court under the Employee Retirement Income Security Act (ERISA),5 the media hailed it a victory for the managed care industry.6 The plaintiff, Cynthia Herdrich, alleged that the HMO bribed its physicians with a financial incentive plan that induced them to deny her needed care to save the plan money. She sued the HMO for breaching its ERISA fiduciary duty. In finding for the defendant HMO, the Court held that the HMO was not the ERISA plan and that its medical treatment decisions were not governed by ERISA fiduciary duty provisions. HMO stocks immediately soared7 because the court's opinion took notice that while there are risks associated with rationing medical care;8 "... no HMO organization could survive without some incentive connecting physician reward

4 Health Maintenance Organization, an insurance business structure for reimbursing the cost of medical services. While the generally accepted term is MCO (managed care organization) this paper will follow the Supreme Court's use of HMO.

6 Court Spares HMO from US Suits. www.chicagotribunecom 6/13/00. ("In a resounding victory for the managed care industry, the U.S. Supreme Court unanimously ruled Monday that a former legal secretary could not use a federal law to sue her Illinois HMO for offering its physicians financial incentives to keep down costs.") Site visited 7/10/00.

7 High court rules patients cannot use federal law to sue HMOs over doctor bonuses. www.kcestarc om 6/13/00. (Cigna jumped 21/4 to 903/4. Aetna, which was upgraded by Salomon Smith Barney on Monday, rose 31/4 to 705/8.) cf B. Jaspen: Illinois HMO profits ailing. www.chicagotribunecom 12/1/99 (Noting that HMO profitability was depressed for several reasons including failure to control costs.)

8 Pegram at 47 ("rationing necessarily raises some risks while reducing others (ruptured appendixes are more likely; unnecessary appendectomies are less so")
with treatment rationing and that the court was not prepared to adjudicate the wisdom of medical care rationing. The court's language clearly removes the treat of ERISA fiduciary liability for managed care decisionmaking.

While *Pegram* is the first decision by the Supreme Court to directly consider a plaintiff's claim that the routine business practices of the HMO industry violate ERISA standards for fiduciary conduct, we question whether the stock market analysts are correct that the Supreme Court has immunized HMO business practices. It is the premise of this article that in doing so, the court also removed the ERISA preemption bar to state law claims for medical malpractice and breach of state fiduciary law. Paradoxically then, although the defendant HMO in *Pegram* won, the managed care industry lost.

In Part I, we review how the HMO industry was initially able to mold ERISA's preemption of state law into a shield that provided the industry with protection from liability when it denied needed medical care and how this has been narrowed by *Pegram*. In Part II, we explore the implications of the *Pegram* rationale for why HMOs are not liable for breach of

9 Id at 46

10 Id at 47 ("any legal principle purporting to draw a line between good and bad HMOs would embody, in effect, a judgment about socially acceptable medical risk. A valid conclusion of this sort would, however, necessarily turn on facts to which courts would probably not have ready access: correlations between malpractice rates and various HMO models, similar correlations involving fee-for-service models, and so on.")

11 *Pegram* has far reaching business implications because virtually all of the medical insurance provided employers is covered by ERISA; an important exception includes medical insurance coverage for workmen's compensation and church plans. 29 USCS 1003 (1997) "Coverage (a) Except as provided in subsection (b) and in sections 201, 301, and 401 [29 USCS @@ 1051, 1081, and 1101], this title shall apply to any employee benefit plan if it is established or maintained (1) by any employer engaged in commerce or in any industry or activity affecting commerce; or (2) by any employee organization or organizations representing employees engaged in commerce or in any industry or activity affecting commerce; or (3) by both. (b) The provisions of this title shall not apply to any employee benefit plan if-- (1) such plan is a governmental plan (as defined in section 3(32) [29 USCS @ 1002(32)]); (2) such plan is a church plan (as defined in section 3(33) [29 USCS @ 1002(33)]) with respect to which no election has been made under section 410(d) of the Internal Revenue Code of 1986 [26 USCS @ 410(d)]; (3) such plan is maintained solely for the purpose of complying with applicable workmen's compensation laws or unemployment compensation or disability insurance laws; (4) such plan is maintained outside of the United States primarily for the benefit of persons substantially all of whom are nonresident aliens; or (5) such plan is an excess benefit plan (as defined in section 3(36) [29 USCS @ 1002(36)]) and is unfunded.

12 No Supreme Court case has thus far addressed the issue of bodily injury or wrongful death arising from the administrative malfeasance of an ERISA plan. Several such cases have been denied certiorari, including *Weems v. Jefferson-Pilot Life Insurance Co.*, 663 So. 2d 905 (Ala.), cert. denied, 116 S. Ct. 434 (1995). In *Weems*, the Supreme Court let stand an Alabama Supreme Court decision upholding a breach of fiduciary duty action under ERISA based on injuries to the plaintiff caused by an employer's failure to pay insurance premiums. Further, the Alabama Supreme Court held that breach of the ERISA fiduciary duty can support punitive damages and held that state courts may try such cases.
ERISA statutory fiduciary duties and how this triggers liability for state law claims. HMO medicine has unique features - such as allowing medical decisions to be made remote from a patient's bedside - that do not fit well into state medical malpractice law and are better analyzed under common law, as opposed to ERISA, fiduciary duty theory. Consequently application of state tort law may become quite complex. We conclude that after Pegram, HMO will be subjected to increased litigation under both of these areas of state law.

The common thread in this analysis is that medical care decisionmaking is ultimately made by individual physicians who are subject to claims under state tort and fiduciary law. To the extent that these physicians are controlled by an HMO or other managed care organization, that entity will be legally responsible for the physician's actions through vicarious liability or through agency theory. All managed care depends on controlling physician behavior, either directly, or through physician medical directors, thus regulation of the behavior of these physicians will regulate the manage of patient care. We recognize, however, that this is only relevant to plans that seek to manage medical decisionmaking. Plans may escape this regulation by limiting their role in the decisions about individual patients and the quality of individual patient care, as did insurers before the advent of managed care. To the extent that this disengagement frees physicians to exercise their own conscience about medical care decisionmaking, it can improve patient care. To the extent that it results in shifting the risk of insurance to physicians without regard to their competence and performance, it will hurt the quality of patient care. For these reasons, we conclude that the most important consequence of Pegram is the empowerment of state regulators.

Part I. HMO Health Care Delivery loses the ERISA Preemption Shield

On Labor Day, 1974 President Ford signed the Employee Retirement Income Security Act [ERISA] to facilitate contracting for national employers by eliminating the need to have to contemplate 50 different state laws. To achieve such a goal, ERISA preempted all state law that "related to" an employee health or welfare plan. But within a decade of ERISA's passage, double-digit medical expense inflation under the prevailing fee-for-service [FFS] reimbursement system pushed health care costs to prohibitive levels for American businesses. In an attempt to

13 While the article is written in terms of physicians, the same theories apply to other health care professionals to the extent that state law allows them to make impendent medical decisions.

14 29 USCA @ 1144(a).

15 Prior to the 1970's, medical decision making was driven by the "Hippocratic ideal of providing the patient with smallest possible benefits regardless of cost; that is medicine was driven by a doctrine incompatible with the concept of world where supplies are limited." Mark Hall. Institutional Control of Physician Behavior: Legal Barriers to Health Care Cost Containment, 137 U. Pa. L. Rev. 431, 435 (1988). "In the Seventies, the bills of the Great Society, and the Viet Nam war became past due, thereby producing an inflationary pressure on the American economy. Medical Inflation was further aggravated by an Arab oil embargo. All cost rose; and medical costs in
resolve such medical inflation the nation embraced managed care – the delivery of health care modulated by utilization review and financial incentives as the method to reduce medical costs. Stimulated by new demand, the insurance industry produced a number of managed care products of which the quintessential is the Health Maintenance Organization (HMO). HMOs are the most aggressive in applying utilization review and financial incentives to control medical costs. Additionally, an HMO operating under ERISA had a competitive advantage in the marketplace because ERISA's preemption of state tort law served to shield the HMO from liability from medical malpractice claims. Soon the majority of medical insurance products offered by employers, as part of a benefit package, were HMOs organized under ERISA.16

ERISA's preemption of state law meant that any state tort law, including medical malpractice, that "related to" an ERISA plan was preempted.17 Accordingly, in the early years of managed care, the courts had to determine whether a denial of care decision was a utilization of benefits decision [hence "related to" the ERISA plan] or medical malpractice [which was not "related to" the plan]. The first courts to tackle this problem viewed a denial of care decision to be a utilization review decision by the ERISA plan, and not medical malpractice.18 This freedom from medical malpractice liability gained by a HMO under ERISA, provided a qualified employer benefit plan with a competitive advantage in the marketplace because the HMO would not have to purchase insurance coverage.19 Because individual state tort law interference with the operation of a national employer's plan was precisely the evil that ERISA sought to prevent though the use of preemption, as applied to health care, ERISA preemption was soon used as a shield to protect the HMO from exposure to medical malpractice liability.

Thus the perceived "positive" of cost efficient managed care was that it would control medical inflation and therefore help to make national employers more cost competitive in the

---

18 The leading cases holding denial are utilization review decisions are Wickline v. The State of California. 192 Cal. App. 3d 1630 (1986) and Corcoran v. United Healthcare, Inc., 965 F.2d 1321 (5th Cir. 1992).

19 Richards supra note 19 at 451
new global market. However, the downside of more "cost efficient" health care is that managed care is perceived to distort the loyalty of the physician providers. Under fee-for-service reimbursement, the traditional theory was that the interests of the doctor and patient were aligned; thus, more medical care was seen by both the patient and the physician to be good medical care. Patients appreciated the extra attention, while the physicians received lavish remuneration. In contrast, under managed care the interests of the doctor and patient are clearly disassociated; in fact, the doctor's and patient's interests have become "triangulated" such that the third corner of the triangle is occupied by an HMO. The addition of the HMO to the doctor-patient relationship inerodably produces a paradigm shift in the relation of the doctor to the patient, which undermines the relationship of trust between the doctor and the patient.

20 Whether managed care provides for more cost efficient health care delivery could be debated. Alice A. Noble, Troyen A. Brennan The Stages of Managed Care Regulation: Developing Better Rules 24 J. Health Pol. Pol'y & L. 1275 (1999)(Disusing consumer backlash when managed care products fail to control cost and provide what is conceived to be less than ideal care.) William M. Sage: Regulating through Information: Disclosure Laws and American Health Care. 99 Colum. L. Rev. 1701, 1704 (1999)("Not surprisingly, corporate intrusion into health care decisions turned out to be as unpalatable as government intervention, prompting the current backlash against managed care and renewing interest in preserving professional ideals through regulation. Rather than asserting an alternative paradigm, this most recent upheaval is searching for a way to manage managed care-to control cost and maintain access without leaving life-and-death decisions to executives and accountants.) Charles Van Way: Death of Managed Care? Metropolitan Medical Society of Greater Kansas City Bulletin, March 2000, www.metromed.com ("It is a central assumption of the Great Health Care Revolution that medical care can be managed. So we have tried. We've tried very hard. A lot of businessmen and managers have become wealthy, but has it worked? Well, no. It's failed. In fact, it's failed in a spectacular enough fashion to seriously annoy the voting public.") If there was a true crisis in the delivery of health care in America; i.e. a true demand for "quality" health care, it would be provided, perhaps at a higher cost, but in many cases it could be done at the same or lower costs - if the plans had a long enough time horizon so that the full costs of improvident short term cost saving strategies were incorporated in the plan costs. (Thomas M. Burton, Examining Table: Operation that rated Hospital was a success, but the Patient died. WSJ 8/23/99. 1999 WL-WSJ 24910931.)

22 In practice, more care is not necessarily good care, since it might place the patient at needless risk because the physicians might have a financial incentive to perform care that was beyond their expertise. Also, even if arguably medically necessary, the care might be unwanted, but accepted anyway because many patients have trouble resisting the moral authority of their physician. See Elliot S. Fisher, H. Gilbert Welch, Avoiding the Unintended Consequences of Growth in Medical Care. JAMA 281:446-453 (1999).

23 Richards, supra note 4, at 451; provides a more detailed discussion of the structure and functioning of managed care organizations.

24 Evidence that patient's need to have trust in their physicians may be observed in the public's favorable response to US Healthcare's granting physicians more autonomy. [Laura Landro: Living With Change The Decision Is Yours: Doctors are starting to embrace information technology and it's changing their relationship with patients. The Wall Street Journal October 18, 1999. WL-WSJ 24918086.]
Ultimately, whether a particular patient is over or under treated rests upon the professional integrity of the treating physician.  

Congress in 1974, which had only the year before passed measures to aid the infant manage care industry, could not have imagined that the enactment of ERISA could distortion the fundamental unit of health care delivery, i.e. the doctor patient relationship. But by the mid-1990's, the implications of the Supreme Court's expansive view of "related to" as a trigger for ERISA preemption was recognized in multiple industries. Once some aspect of state law was found "related to" employee benefits plan, that aspect of state law was nullified by ERISA's preemption clause. With respect to health care, preemption of state tort law meant that a patient-beneficiary who sustained bodily injury due to a denial of care administrative decision of an ERISA plan could be left "without a remedy" because ERISA limited relief to equitable remedies –i.e. non pecuniary relief. As construed by Russell, the combination of ERISA

25 Pegram at 42 ("[I]n an HMO system, a physician's financial interest lies in providing less care, not more. The check on this influence (like that on the converse, fee-for-service incentive) is the professional obligation to provide covered services with a reasonable degree of skill and judgment in the patient's interest. See Brief for American Medical Association as Amicus Curiae 17-21.")

26 42 USC 300e-10

29 Dockter v. Aetna Life Insurance Co., No. 91-56029, 1993 US App. Lexis 4385, at *5-6 (Ca. 1993) cert. denied 114 S. Ct 310 (1994). Reported as a Table case at 988 F.2d 118 (1993)("[U]nder the law, however, ERISA preempts State law claims even if the plaintiff is left without a remedy.") Citing Olson v. General Dynamics Corp. 960 F.2d 1418, 1422-3 (9th Cir. 1991) cert. denied 111 S. Ct 2968 (1992)(Declining to devise a federal common law remedy even where plaintiff is left without a remedy").

30 Massachusetts Mut. Life Ins. Co. v Russell, 473 US 134 (1985). Prior to Pergam, the "Russell Doctrine" shaped the court's view of compensating an ERISA beneficiary for harm due to denial of care. [Massachusetts Mut. Life Ins. Co. v Russell, 473 US 134 (1985).] Russell alleged that she had been wrongfully denied medical coverage by her insurer and consequently suffered financial embarrassment when such coverage had to be acquired on the spot market. [Russell at 136-7.] The issue, which distinguishes Russell from the Pegram, is that the plaintiff in Russell never sustained any physical injury; her injury was purely a financial one. A monetary award for Russell's damages was held to be inconsistent with the "legislative intent and consistency with the legislative scheme." [Russell at 145 following Cort v. Ash, 422 U.S., at 78, "In determining whether a private remedy is implicit in a statute not expressly providing one, several factors are relevant. First, is the plaintiff 'one of the class for whose especial benefit the statute was enacted, -- that is, does the statute create a federal right in favor of the plaintiff? Second, is there any indication of legislative intent, explicit or implicit, either to create such a remedy or to deny one? Third, is it consistent with the underlying purposes of the legislative scheme to imply such a remedy for the plaintiff? And finally, is the cause of action one traditionally relegated to state law, in an area basically the concern of the States, so that it would be inappropriate to infer a cause of action based solely on federal law?" (citations omitted)]
preemption of state tort law and the limited options for granting relief under ERISA was translated to mean that victims of wrongful denial of care decisions were left without remedy for harm suffered by the administrative malfeasance of an ERISA plan. This anomalous situation was made worse because a patient of non-ERISA qualified plan who were denied medical care were free to seek compensation from their insurance plans. More fundamentally, the states were denied the power to address these problems through administrative regulation of qualified plans because state regulation of benefits was also preempted.

1. The "Related to Problem" found in ERISA Preemption

As any curbstone philosopher can tell you the problem with using "related to" as a trigger for ERISA preemption is that everything is related to everything else to one degree or another. Hence, any state law which was remotely "related to" an employer's benefit plan, including law

Specifically, "[t]he assumption of inadvertent omission [of legal remedies] is rendered especially suspect upon close consideration of ERISA's interlocking, interrelated, and interdependent remedial scheme, which is in turn part of a 'comprehensive and reticulated statute.'" [Russell citing Nachman Corp. v. Pension Benefit Guaranty Corporation, 446 U.S. 359, 361 (1980).] Russell considered the ERISA plan and the fiduciary to be a single entity, adding "Congress did not provide, and did not intend the judiciary to imply, a cause of action for extra contractual damages caused by improper or untimely processing of benefit claims." [Russell at 148.] Moreover, ERISA "already provided specific relief for the sort of injury the plaintiff had suffered (wrongful denial of benefits)." [Varity Corp. v. Howe 516 US 489, 512 (1996).] For Russell, the proper remedy for wrongful denial of benefits was for the plaintiff to file a suit for recovery of the benefit. [Russell at 144.] Such a suit is based on 29 USC 1133 ["Claims procedure In accordance with regulations of the Secretary, every employee benefit plan shall-- (1) provide adequate notice in writing to any participant or beneficiary whose claim for benefits under the plan has been denied, setting forth the specific reasons for such denial, written in a manner calculated to be understood by the participant, and (2) afford a reasonable opportunity to any participant whose claim for benefits has been denied for a full and fair review by the appropriate named fiduciary of the decision denying the claim"].] Accordingly, the Russell court declined to "tamper" with the statutory remedies. [Russell at 147.] Because Russell's actual damages were limited to pecuniary loss since there was no bodily injury; the damages in Russell are analogous to those damages, which Congress had anticipated as occurring secondary to the administrative malfeasance of a pension fund. Given the facts at hand in Russell, the court appropriately limited the plaintiff's remedies under ERISA. However, the injury sustained by plaintiffs like Cynthia Herdrich represent an unprecedented form of injury caused by breach of an ERISA fiduciary duty. Unfortunately, the failure to distinguish financial damage from bodily injury damage after a patient is denied medical care pervades legal analysis of ERISA medical administrative malfeasance cases prior to Pegram.

31 Advisory notes accompanying 29 USCA 1132 citing Andrews-Clarke v. Travelers Ins. Co. 984 F.Supp. 49 (D.Mass.1997) ("Civil enforcement provision of ERISA does not authorize recovery for wrongful death, personal injury, or other consequential damages caused by improper refusal of insurer or utilization review provider to authorize treatment.")

32 Fox v. Health Net of Cal., Cause No.219692 (Cal. Super. Ct., Riverside City, 12/23/93)

33 California Div. Labor Standards Enforcement v. Dillingham Construction NA, Inc., 519 US 316, 336 (1997). "I think it would greatly assist our function of clarifying the law if we simply acknowledged that our first take on this statute was wrong; that the "relate to" clause of the pre-emption provision is meant, not to set forth a test for pre-emption, but rather to identify the field in which ordinary field pre-emption applies."
concerned with patient safety were preempted by ERISA. By the mid-1990s, the expansive nature of "related to" was causing unanticipated consequences in a number of industries. Thus, the tide changed on "related to" with the Supreme Courts 1995 opinion in New York State Conference of Blue Cross & Blue Shield Plans v. Travelers Ins. Co. [Blue Cross].34 After Blue Cross, state laws that are of general applicability, those laws which only indirectly impact on the ERISA plans, would not longer be preempted under ERISA.35 The key question left unanswered by the Blue Cross, Dillingham, and DeBouno line of cases was precisely which laws are too tenuously related to employee benefit plan so as not to trigger ERISA preemption. After Blue Cross the appellate courts struggled with where to draw the line between "related to" and too tenuously related with respect to HMO administrative malfeasance in health care delivery.

One of the first cases after Blue Cross to address this issue was the Lancaster case, which involves the medical care given to an 11-year-old child with headaches.36 Beginning in 1991, the child was taken to her primary care physician [PCP], an employee of Kaiser Foundation Health Plan, which in turn was operated under ERISA.37 Over the course of the five years she was under treatment by the Kaiser HMO, no diagnostic tests were performed and the patient was never referred to a neurologist for evaluation. The child was treated symptomatically with adult strength narcotics until 1996, when the child became nauseated and started vomiting. The parents demanded a neurologic evaluation, which revealed that 40% of the child's brain had been replaced by tumor.

Kaiser is an interesting example of the use of branding in HMOs. While most commentators know of the Kaiser model in California, with its large physician panels and access to a broad variety of hospitals, Kaiser in other states is often very differently organized, with very small panels of physicians, limited specialty coverage, and inadequate access to hospitals and clinical facilities. Thus a Kaiser plan in Virginia, where this case took place, may be very different from the California model that is the public perception of Kaiser, a potentially troubling consumer expectations problem. This is critical to Lancaster because the issue became one of denying her proper testing and referral to a specialist. Moreover, these plans have two corporate entities. The insurance plan is set up as a non-profit corporation and makes much of this in its public relations campaigns. The physicians work for a separate for profit corporation; they

34 514 U. S. 645 (1995)
37Id. At 1139
become stockholders in and thus share in the profits. The two corporations are tightly intertwined, with the plan buying care from the physician corporation. The physician corporation, in turn, pays the physicians incentives "whereby physicians received bonuses for avoiding excessive treatment and tests."\textsuperscript{38} The key factors driving these incentive schemes, which are used in most HMOs and which are the focus of litigation in this area, is that it costs the plan money to send patients outside the plan, to run tests, and to admit and treat the patient in the hospital, especially in hospitals that are not controlled by the plan. Care rendered by in-plan physicians does not increase costs, so in-plan referrals are generally not penalized, while out-of-plan referrals are. Thus the defendant physician in \textit{Lancaster} would see his bonus reduced if he sent the patient to specialist outside the plan or if he ordered diagnostic tests. In the California style Kaiser plan, this is not a critical issue because the plan has adequate access to specialists and testing facilities, but in a location with few physicians and facilities, the same incentive scheme has become very dangerous.

Negligent care was clearly rendered to the Lancaster child, and formed the basis for a classical medical malpractice claim. Additionally, the plaintiff argued that the same facts established a breach of fiduciary duty by the physician and the plan. This allegation was based on the negligent establishment of a "Incentive Program and for intentionally and knowingly concealing its existence from the plaintiff."\textsuperscript{39} Kaiser "characterized this claim as attacking an administrative decision of the plan, not a medical decision."\textsuperscript{40} The court accepted Kaiser's characterization and looked for precedent in a line of cases involving utilization review, which conclude that administrative decisions involving benefits are preempted under ERISA.\textsuperscript{41} Since such fraud claims are based on State law, "[p]ermitting these claims to proceed would undermine the congressional policies that underlie ERISA. Absent preemption, for instance, benefit plans would be subject to conflicting directives from one state to the next."\textsuperscript{42} The court then limited the plaintiff's recovery to classic medical malpractice against the physician and vicarious liability against the plan, based on Kaiser's holding out the physicians as plan employees through its corporate branding of the physician group. The court rejected the breach of fiduciary duty based on the incentive scheme and suggested that "there is no remedy against an ERISA plan using an improper incentive plan or even hiding the incentive plan from its patients."\textsuperscript{43}

\textsuperscript{41}\textit{Lancaster} at 1146 citing \textit{Jass v. Prudential Health Care Plan}, 88 F.3d 1482 (7th Cir. 1996)
\textsuperscript{42}\textit{Lancaster}, 958 F.Supp. at 1150
\textsuperscript{43}Richards supra at note 19, at 458
Lancaster is illustrative of a body of case law that had developed in the previous ten to fifteen years. The courts took the view that ERISA's preemption of state law allows for the ERISA qualified health plan to engage in administrative malfeasance either by arbitrary denial of care, or by the creation of disingenuous physician incentives, without triggering state law liability for any bodily injury caused to a patient-beneficiary. Hence, while the physician in Lancaster could be sued in state court for the failure to make a proper referral, the fact that the physician's conduct was directly caused by HMO enticement was neither a defense to the physician nor the basis for a cause of action against the HMO. Moreover, the Lancaster court allowed the plaintiff a cause of action against Kaiser predicated on vicarious liability for holding out that the physicians were "Kaiser" physicians. Thus the Lancaster distinguished direct plan liability and vicarious liability for medical malpractice. In contrast to direct liability, which the court consider to be barred under ERISA preemption, ERISA posed no barrier to an action for vicarious liability.

2. Using Fiduciary Law to solve the "Related to" Problem

In addition to state tort law, fiduciary law is used to modulate the professional behavior of physicians, thereby indirectly influencing HMO behavior. Thus independent of the medical malpractice approach of Lancaster, the issue of whether breach of fiduciary duty was "related to" ERISA plans arouse as plaintiff's lawyer tried to collaterally attack HMO administrative malfeasance. Shea and Neade analyzed the degree to which fiduciary law was related to an employee benefit plan. While separated by nearly two years, Shea and Neade have very similar facts and the legal theory in Neade was clearly based on the holding in Shea. Patrick Shea was a forty-year-old executive in the computer industry who had a history of heart disease in his family, but was in good health personally. While on a business trip he suffered chest pains, and, upon his return, he sought out his family physician for a diagnostic workup. As described in the plaintiff's complaint, Mr. Shea's primary care physician (PCP) reassured him that he had nothing to worry about, as he was too young to have a heart attack. His pains persisted, as did the reassurances. After several months of trusting, after being dissuaded by his physician that it was unnecessary for Mr. Shea to spend his own money to see a cardiologist, Mr. Shea died of "heart failure." Upon investigation, what was on its face a simple case of grossly negligent medical care became a complex ERISA case of breached fiduciary obligations. The appeals court held,

45 Neade v. Portes, 710 N.E.2d 418 (Ill.App. 2 Dist. 1999)
46 Shea 107 F.3d at 626. Since this case arose from a dismissal, the court only explores the plaintiff's facts. It is possible that they do not paint an accurate picture of the care provided by defendant and that a different picture will emerge as facts are developed with further discovery.
47 Shea 107 F.3d at 626 " Unknown to Mr. Shea, Medica's contracts with its preferred doctors created financial incentives that were designed to minimize referrals. Specifically, the primary care doctors were rewarded for not
under ERISA, Mr. Shea's widow did have a cause of action for breach of fiduciary duty since the physician's incentive program, in essence, bribed the physician-fiduciary not to provide medical care.\footnote{Shea 107 F.3d at 629 "[W]e believe Mrs. Shea has stated a claim against Medica for breaching the fiduciary obligation to disclose all the material facts affecting her husband's health care interests. When an HMO's financial incentives discourage a treating doctor from providing essential health care referrals for conditions covered under the plan benefit structure, the incentives must be disclosed and the failure to do so is a breach of ERISA's fiduciary duties". See also the discussion of Shea in Lazorko v. Pennsylvania Hosp., WL 405055 (E.D.Pa., Jun 30, 1998).} Interestingly, the Shea court never explicitly stated just who was the fiduciary;\footnote{The fact that the Shea did not define the fiduciary is key to understanding Pegram. The citations used to support the Shea opinion suggest that the fiduciary common law was contemplated. This would have been appropriate under ERISA because ERISA incorporates fiduciary common law. In contrast, Pegram consider only statutory fiduciary duty as established ERISA.} whether it was a particular physician or a non-medical administrator of the ERISA plan, and remanded the case without specific instruction on the nature of the remedy.\footnote{Although Shea was unprecedented as a breach fiduciary duty cause of action arising under ERISA, Shea implicitly contemplates damages for bodily injury arising from medical administrative malfeasance, and recognized that an incentive program that corrupts the judgment of a fiduciary is far from unheard of under ERISA. Dasler v. E.F. Hutton & Co., Inc., 694 F.Supp. 624 (D.Minn.1988) (Defendant liable for breach of fiduciary duty where incentive program result in excessive trading in security.) Anweiler v. American Elec. Power Serv. Corp., 3 F.3d 986, 991-92 (7th Cir.1993)(Defendant breached fiduciary duty owed by failure to provide complete material information concerning the methods of reimbursement.) Ries v. Humana Health Plan, Inc., No. 94 C 6180 1995 Lexis 16592 at *13 (N.D.Ill., 1995) citing 29 USCA 1104(a)(1)(A) ("fiduciary's covert profiteering at the expense of insureds is inconsistent with its duties of acting 'solely in the interest of the participants and beneficiaries.' ")}  

Similarly, Anthony Neade was approximately 37 years old in 1990 when he began to show the classic symptoms of coronary artery disease, including chest pain radiating into his arm and shortness of breath. Neade had a family history of heart disease, was overweight, suffered from hypertension, smoked, and had a high cholesterol count.\footnote{Neade v. Portes, 710 N.E.2d 418, 421 (Ill.App. 2 Dist. 1999).} While in the hospital, Neade underwent various tests, including a thallium stress test, which was interpreted as normal.\footnote{Thallium studies have a false positive rate of approximately 20% for detecting coronary artery disease when compared with coronary angiography.} Following his discharge from the hospital, Neade continued to experience chest pain, and like Mr. Shea was assured that his chest pain was not cardiac in origin. On one such occasion a doctor taking call for Mr. Neade's PCP evaluated Mr. Neade, and recommended the "gold standard" for the evaluation of coronary artery disease: coronary angiography. However, Mr.
Neade's PCP, without any re-evaluation, terminated further diagnostic testing.\textsuperscript{53} Ultimately, Mr. Neade suffered a massive myocardial infarction caused by coronary artery blockage, and died nine days later. The care rendered to Mr. Neade was sub-optimal, since he should have received further medical evaluation.\textsuperscript{54} In its review of the case, the \textit{Neade} court recognized that an action for breach of fiduciary duty could arise from the same set of facts that support a cause of action for medical malpractice.\textsuperscript{55}

Two factors emerge as common threads in \textit{Lancaster, Shea} and \textit{Neade}. First, the alleged medical malpractice was not a single mistake, based on information from a single patient encounter, but a systematic failure to re-evaluate the initial diagnostic decision in the face of symptoms and complaints by the patient that were incompatible with the diagnosis. Second re-evaluation of the patient would have required spending plan resources for hospitalization, additional testing, and/or out-of-panel expertise which would have thereby increased the cost to the plan and decreased the physician's reimbursement. Under FFS, which tends to err on the side of too much/unnecessary care, it is very likely that the patient would have received the hospitalization, testing, and specialist referral. While the PCP might be equally incompetent in both scenarios, the involvement of other professionals and the additional test information would make the patient's condition much harder to ignore.

In contrast, several factors distinguish \textit{Lancaster} from \textit{Shea/Neade}. The most important distinction is the consideration given to the degree of fiduciary duty owed by the physician to the patient under ERISA. The word "fiduciary" does not even appear in the analysis of \textit{Lancaster}. In contrast, the analysis in \textit{Shea} is heavily focused upon the fiduciary duty owed by physicians, especially the obligation for physicians to conduct themselves with good faith and undivided loyalty to their patients.

Second, \textit{Lancaster} viewed denial of care decisions as being a utilization and review decision and thus not a medical decision. From \textit{Lancaster}'s vantagepoint, managed care health plans provide two independent functions "namely that of health care insurer and that of medical services provider."\textsuperscript{56} \textit{Lancaster} concluded that health plans only make administrative decisions and not medical decisions because such decisions: "cannot be stretched to imply that [defendant] went beyond the administration of benefits and undertook to provide [decedent] with medical

\textsuperscript{53} Even after the PCP requested a consultative examination by a part-time physician, the PCP elected not to proceed with coronary angiography choosing instead to rely on the reported results of the thallium scan.

\textsuperscript{54} See \textit{Macdonald v. United States}, 853 F. Supp. 1430 (M.D. Ga. 1994), in which the court found that a similar patient history should have alerted the physician to the patient's high risk of a heart attack.

\textsuperscript{55} \textit{Neade}, 710 N.E.2d at 426

\textsuperscript{56} \textit{Lancaster}, 958 F.Supp. at 1139
advice."57 For Lancaster it was only natural that denial of medical care decisions should fall under the heading of utilization and review because:

"... [t]he absurd consequences of concluding otherwise confirm the correctness of this conclusion. ERISA plans are required to provide a participant or beneficiary written notice of a denial of benefits and an opportunity for a full and fair review of that denial by an appropriate plan fiduciary. @ 503, 29 U.S.C. @ 1133. The ERISA participant or beneficiary denied benefits under his or her plan can then seek judicial review of that specific administrative denial. See @ 502(a)(1)(B). Thus, if every instance of negligent treatment by a physician were construed as an administrative denial of a claim for plan benefits, then in every such case the patient would have the right to notice and review with respect to that medical treatment decision, followed by a hearing and judicial review with respect to each "denial" of a plan benefit. ERISA neither contemplates nor requires such an absurd result."58

In short, under Lancaster utilization and review decisions including denial of care decisions are to be analyzed separately and independently from medical decisions.

To the Shea and other courts,59 a "denial of care" decision is a medical decision, rather than an allocation of resources issue. Interestingly, Shea, in choosing to recognize that the case at hand concern a medical decision, rather than a utilization and review decision, did so by citing the same case as Lancaster.60 Because physicians in a managed care environment made medical decisions, the physician has a "fiduciary obligation to disclose all the material facts" to the patient.61 In finding the physician a fiduciary under ERISA, Shea took implicit notice that some injuries have irrevocable consequences. A utilization and review decision, when made in the context of the administration of a pension plan can be litigated for years without fear that a party

58Lancaster, 958 F.Supp. at 1146
59See also: Murphy v. Board of Medical Examiners of the State of Arizona, 949 P.2d 503 (1997). Dr. Murphy was the medical director for a national HMO. He was not licensed in Arizona and the Arizona Board of Medical Examiners censured him for practicing medicine in Arizona without a license. Murphy contested this finding, claiming that when he reviewed patient care and medical necessity decisions he was only making administrative decisions for the HMO. The Arizona Supreme Court disagreed, finding that when medical director administrative work included decisions that affected the care of individual patients, the medical director is making a medical decisions.
60Shea, 107 F.3d at 627 citing Kuhl v. Lincoln Nat'l Health Plan of Kansas City, Inc., 999 F.2d 298, 301-4 (8th Cir. 1993). ("[W]e have held that claims of misconduct against the administrator of an employer's health plan fall comfortably within ERISA's broad preemption provision").
61Shea, 107 F.3d at 629
will suffer physical injury. But, as the tragedies of the *Shea, Neade, and Herdrich* well illustrate, time is critical in medical decision cases and delay in treatment can have irreversible consequences.

The final factor, which distinguishes *Lancaster* from *Shea/Neade* was the degree to which the court believed the plaintiff had an adequate remedy. *Lancaster* concluded that the plaintiff's medical malpractice posed "no ERISA questions because ERISA does not apply to medical care decisions made by treating physicians." Moreover, the plaintiff's vicarious liability claim against the plan based on ostensible agency was not preemptedly ERISA preemption, leaving the plaintiff a clear remedy against the plan. *Lancaster* envisioned the plaintiff would receive some compensation on a tort theory from the state court upon remand. In contrast, the *Shea* court observed "the district court correctly decided that ERISA preempts Mrs. Shea's state-law claims." Thus, *Shea* contemplated that its award for breach of fiduciary duty was to be the sole form of relief available to Mr. Shea's widow.

3. Applying ERISA Statutory Fiduciary Law to solve the "Related to" problem

Cynthia Herdrich filed suit against her physician and Carle Clinic for breach of fiduciary duty, arising from medical care provide by an ERISA qualified plan. Defendant Carle Clinic "operate[d] a pre-paid health insurance plan which provides medical and hospital services" and employed Ms. Herdrich's physician Dr. Pegram. Although examination of Ms. Herdrich by Dr. Pegram identified a six by eight centimeter abdominal mass, which was inflamed, Dr. Pegram allegedly "delayed instituting an immediate treatment of Herdrich", per the policies of the plan. To make matters worse:

"During this unnecessary waiting period, Herdrich's health problems were exacerbated and the situation rapidly turned into an "emergency" - her appendix ruptured, resulting in the onset of peritonitis. In an effort to defray the increased costs associated with the surgery required to drain and cleanse Herdrich's ruptured appendix, Carle insisted that she have the procedure

68 Id.
performed at its own Urbana facility, necessitating that Herdrich travel more than fifty miles from her neighborhood hospital."69

As such, the delay "subjected [Ms. Herdrich] to a life threatening illness, a longer period of hospitalization and treatment, more extensive, invasive and dangerous surgery, increased hospitalization costs, and a greater ingestion of prescription drugs."70 Similar to the plaintiffs in Lancaster, Shea and Neade, Herdrich's complaint alleged "the intricacies of the defendants' incentive structure [provided for] an incentive [to] existed for [physicians] to limit treatment."71 Moreover, such incentives mean that:

". . . [a] doctor who is responsible for the real-life financial demands of providing for his or her family sending four children to school (whether it be college, high school or primary school), making house payments, covering office overhead, and paying malpractice insurance might very well "flinch" at the prospect of obtaining a relatively substantial bonus for himself or herself."72

In analyzing Herdrich the Appellate court took notice that "defendants had the exclusive right to decide all disputed and non-routine [and thus where] in fact, [ERISA] fiduciaries."73 In fact, Dr. Pegram owed fiduciary duties not only to Ms. Herdrich due to the nature of the doctor-patient relationship, but also to her employer Carle Clinic and to the ERISA plan itself. Dr. Pegram's multiple fiduciary duties were not mutually exclusive and frequently lead to conflicts of interest, as the doctor attempted to serve multiple masters. Herdrich concluded the incentive plan could reasonably have corrupted the fiduciary duty owed by the physicians and plan to the patient beneficiary. The appellate court then remanded the case for a determination of damages along guidelines outlined by the court. Herdrich directed that determination of damages for breach of ERISA fiduciary duty was to be indexed to the unnecessary medical expenses incurred by the plan. Requiring that damages be structured in such a manor was clearly within a literal reading of the determinations of damages to an ERISA pension plan.74

74 Advisory notes accompanying 29 USCA 1132 Harsch v. Eisenberg, 956 F.2d 651, (Wis. 1992) cert. denied 113 S.Ct. 61, 506 U.S. 818 ("Extracontractual compensatory damages are not available under ERISA section allowing "participant or beneficiary … to recover benefits due to him under the terms of his plan, to enforce his rights under the terms of his plan, or to clarify his rights to future benefits under the terms of the plan.") As policy, Congress
Shea, Neade, and the appellate decision in Herdrich all attempt to resolve a major anomaly in the law: when the a health plan's administrative malfeasance results in bodily injury to a beneficiary, the traditional remedies available to such a beneficiary are markedly different depending on whether the plan is and ERISA qualified plan.

In all of the above cases, the HMO administering an ERISA health plan used financial incentives to modify their physicians' judgment. Such financial arrangements are frequently kept secret from patient-beneficiaries by the use of a "gag rule" clause in the physician provider's contract. Whether such business practices are used alone or in tandem as part of a system with other behavior modifiers, their purpose is the same: to establish dual loyalties in physicians. The problem with dual loyalties in physicians is, of course, that the need to serve multiple masters perniciously corrupts the physician's decision-making process.

4. Pegram's narrowing of ERISA Preemption

Against this confusing and contradictory back drop of appellate cases, the Supreme Court accepted Pegram for review. There are two keys to understanding Justice Souter's opinion. The most important is the Court's narrow view of what constitutes an employee health plan under ERISA. This excludes the HMO from ERISA preemption because the provision of the medical care is not the ERISA plan. Second, after Pegram an action against a physician or HMO for breach of statutory fiduciary, as in Herdrich, is no longer an available to plaintiffs, but the court did not limit the application of fiduciary common law actions against either of these two categories of defendants. Consequently, the court has left the door open for fiduciary common law actions and remedies to be used as a method to remedy wrongful HMO denial of care decisions.

wished to protect the pension plans from unexpected and excessive financial liability; accordingly, Congress prescribed that damages were to be clearly definable and hence predictable.

75 A typical gag clause prohibits a contracting physician from making disclosures that could undermine the trust the patient has in the physician or insurer. As the physician generally has as much to gain, as the HMO themselves by keeping incentive plans secret, it is mere speculation that the simple prohibition of such clauses in a physician contract will induce the physician to have a more open discussion with patients about financial incentives. A majority of states now prohibit the use of a gag rule clause in a provider's contract. However, because employers provide the majority of commercial insurance, ERISA preemption has in the past nullified the anti-gag rule statutes. In light of the recent holding in Pegram, infra, gag rules may now be enforceable across the board.

76 Confusion exists in these cases as to which law was applicable. Shea and Neade contemplated that the physician involved had breached fiduciary common law duties, while Herdrich contemplated that the physicians involved had breached ERISA statutory fiduciary obligations to their patient beneficiaries. The contradiction of these opinions are is best illustrated by observing the differing remedies which were contemplated by Lancaster and Shea.

77 ERISA covers employee benefits and pension plans. While ERISA comprehensively regulates the pension plans it provides only minimal details on the management of the benefit / health plans.
Pegram took notice that "ERISA's definition of an employee welfare benefit plan is ultimately circular: "any plan, fund, or program ... to the extent that such plan, fund, or program was established ... for the purpose of providing ... through the purchase of insurance or otherwise ... medical, surgical, or hospital care or benefits." To the Pegram court the word "plan" referred "to a scheme decided upon in advance." In the delivery of health care, this means that the ERISA plan is limited to "a set of rules that define the rights of a beneficiary and provide for their enforcement. Rules governing collection of premiums, definition of benefits, submission of claims, and resolution of disagreements over entitlement to services are the sorts of provisions that constitute a plan." In other words, as it interfaces with the delivery health care, the ERISA plan is limited to the contractual relationship between the employer and employee that outlines the employees benefits; and not the contractual rules by which the HMO operates. The structure of an HMO is not an ERISA plan, nor is the operation of an HMO necessarily part of the HMO plan. To the extent that operation of the HMO is directly dictated by the plan, such operations would be part of the plan. [This situation could only arise where a self-insuring employer was operating the HMO themselves.] Because the HMO itself is removed from the employer-employee benefit contract, the HMO's contractual relationships that motivate its physician providers are even more removed from the plan. The remoteness of the HMO-provider contractual relationship served as the foundation for the Pegram court to conclude that physician incentives are too tenuously connected to the ERISA plan to be "related to" the plan.

However, to the extent that an HMO is acting as a fiduciary agent of the plan, the HMO might still owe the plan and its beneficiaries certain duties under ERISA. A fiduciary under ERISA is defined as anyone who wields "discretionary authority or discretionary responsibility in the administration of [an ERISA] plan." The use of the word "discretionary" was to bring all persons involved in making administrative decisions for ERISA plans into a common regulatory scheme. When Congress enacted ERISA, it "intended that this statutory definition of "fiduciary"

78 Pegram at 52 citing §1002(1)(A)
79 Id at 52 citing Webster's New International Dictionary 1879 (2d ed.1957); Jacobson & Pomfret, Form, Function, and Managed Care Torts: Achieving Fairness and Equity in ERISA Jurisprudence, 35 Houston L. Rev. 985, 1050 (1998)
80 Id citing Hansen v. Continental Ins. Co., 940 F. 2d 971, 974 (CA5 1991)
81 Id at 50 "the provisions of documents that set up the HMO are not, as such, an ERISA plan, but the agreement between an HMO and an employer who pays the premiums may."
82 This would be in accordance with ERISA's "deemer" clause (29 USCA 1144(c)), which is beyond the scope of this communication.
be broadly interpreted." This meant that one could become an ERISA fiduciary without having a formal contractual relationship with the beneficiary. The statutory definition of a fiduciary under ERISA reflects the realization by Congress that it would need the business expertise of the employers to design ERISA-qualified plans. With respect to pension funds for employees, the employer had an obvious conflict of interest. By defining the ERISA fiduciary on the bases of discretionary authority, Congress recognized that the contractual relationship between the employer and employee would be inadequate to safeguard funds in a pension plan, hence the plans would have to be policed statutorily. Historically, the common law had policed contracts by finding that a power party owed fiduciary obligations to the other party. Congress' statutory modification of fiduciary common law was simply an attempt to tailor this ancient body of laws to a creature of the twentieth century. But in so doing, Congress had accepted that its statutory fiduciaries would out of necessity have divided loyalties.

In making a medical decision a health care provider's judgment is guided by personal experience and accumulated medical knowledge. Given that discretionary means "a power or right conferred upon them by law of acting in officially in certain circumstances, according to their own judgment and conscience, uncontrolled by the judgment or conscience of others" it is clear that in making a medical decision the physician uses discretionary judgment. Thus according to ERISA, whenever a health care provider exercises discretionary judgments, so as to provide a medical service, that provider would become an ERISA fiduciary. Importantly, since

84 Herdrich 154 F.3d at 362, citing Chairman of the House Committee on Education and Labor, 120 Cong. Rec. 3977, 3983 (February 25, 1974) reprinted, 2 Legislative History of the Employee Retirement Income Security Act of 1974 at 3293

85 Herdrich 154 F.3d at 362 "[A] party's fiduciary status hinges not on whether it is named in the plan agreement, but rather on whether it satisfies the statutory definition of a fiduciary in section 1002(21)(A) of ERISA".

87 Id. The need to modify the fiduciary common law was driven ultimately by two factors. First, the common law recognized few relationships to be fiduciary. These limited relationships would not have covered all the parties that would have access to the pension funds that Congress sought to protect. Second, divided loyalties were anathema to fiduciary common law. But as noted above, the employers who were to be "conscripted" into managing the plans would have divided loyalties.

89 Shea never explicitly declared the treating physicians to be fiduciaries but it is implied. Consider, "Health care decisions involve matters of life and death, and an ERISA fiduciary has a duty to speak out if it "knows that silence might be harmful." Shea 107 F.3d at 629 citing Bixler v. Central Penn. Teamsters Health & Welfare Fund, 12 F.3d 1292, 1300 (3d Cir. 1993); Restatement (Second) Of Trusts @ 173 (1959). Also, "This kind of patient necessarily relies on the doctor's advice about treatment options, and the patient must know whether the advice is influenced by self-serving financial considerations created by the health insurance provider. The district court believed Seagate's employees already realized their doctors' pocketbooks would be adversely affected by making referrals to outside
the mere exercise of discretionary judgment over the benefits of an ERISA plan makes an individual a statutory ERISA fiduciary, all medical service providers to ERISA patient-beneficiaries are ERISA fiduciaries regardless of their contractual relationship to the medical plan itself.\(^90\) In short, because of ERISA's broad definition of a fiduciary, every physician involved in the delivery of medical services could be an ERISA fiduciary whose decisions could be subject to breach of fiduciary duty actions. The potential for the federal courts to become clogged by breach of fiduciary duty actions under ERISA predicated on a denial of care decision, was an unspoken policy motive for the *Pegram* court to conclude that physicians and other health care providers, including HMOs, are not ERISA fiduciaries.\(^93\)

ERISA also incorporates fiduciary common law. Thus, "[r]ather than explicitly enumerating all of the powers and duties of trustees and other fiduciaries, Congress invoked the common law of trusts to define the general scope of their authority and responsibility."\(^94\) At common law a "fiduciary relationship exists when the parties are under a duty to act for or give advice for the benefit of another upon matters within the scope of the relationship."\(^95\) Patients specialists. Even if the district court is right, Seagate's employees still would not have known their doctors were penalized for making too many referrals and could earn a bonus by skimping on specialized care."\(^96\) *Shea*, 107 F.3d 628, 628-9.

\(^90\) *Varity Corp. v. Howe* 516 US 489, 517 (1996) "[A] "person is a fiduciary with respect to a plan" and therefore subject to ERISA fiduciary duties, "to the extent" that he or she exercises discretionary authority or discretionary responsibility in the administration" of the plan. citing "ERISA 3(21)(A). See Advisory notes accompanying 29 USCS 1102 (1997) *Custer v Sweeney* (1996, CA4 Va) 89 F3d 1156, 20 EBC 1569 ("Concept of fiduciary under ERISA is broader than common law concept of trustee; it includes not only those named as fiduciaries in plan instrument, or who, pursuant to procedure specified in plan, are identified as fiduciaries, but any individual who de facto performs specified discretionary functions with respect to management, assets, or administration of plan."). Advisory notes accompanying 29 USCS 1106 (1997) citing *Reich v Hosking* (ED Mich, 1996). ("Individual can be held liable as ERISA fiduciary if he or she exercises discretionary authority, or possesses discretionary authority.")

\(^91\) *Herdich*, 154 F.3d at 371

\(^92\) *Herdich* 154 F.3d at 362, citing Chairman of the House Committee on Education and Labor, 120 Cong. Rec. 3977, 3983 (February 25, 1974) reprinted, 2 Legislative History of the Employee Retirement Income Security Act of 1974 at 3293 ( "Congress, when it enacted ERISA, intended that this statutory definition of "fiduciary" be broadly interpreted.")

\(^93\) *Pegram* at 78 ("But we have seen enough to know that ERISA was not enacted out of concern that physicians were too poor to be sued, or in order to federalize malpractice litigation in the name of fiduciary duty for any other reason.")

have limited contractual rights,\textsuperscript{96} while the physicians who arbitrate the patient's medical care exercise power in a non-reciprocal manor,\textsuperscript{97} consequently it is to be expected that physicians are fiduciaries. In fact, the physician-patient relationship has long been deemed to be of a fiduciary character.\textsuperscript{98} "The inherent necessity for trust and confidence requires scrupulous good faith on the part of the physician."\textsuperscript{99} Moreover, "[a] physician occupies a position of trust and confidence as regards his patient - a fiduciary position".\textsuperscript{100} The Missouri Supreme Court opined that "the confidential bond between a doctor and patient is a fiduciary relationship."\textsuperscript{101} In our society a "physician occupies a position of trust and confidence as regards his patient - a fiduciary position. This duty of the physician flows from the relationship with his patient and is fixed by law - not by the contract of employment."\textsuperscript{102} Currently, most jurisdictions have found physicians to be fiduciaries.\textsuperscript{103}

The most significant difference between ERISA's statutory definition of a fiduciary and the way in which the common law views a fiduciary is the degree to which a fiduciary may have divided loyalty. ERISA contemplated that the statutory fiduciary might have divided loyalties.\textsuperscript{104} The extent of scrutiny an ERISA fiduciary is to receive during a review of the fiduciary's

\textsuperscript{96} Frequently, as demonstrated in Shea, an employer contracts with an insurer to provide for medical coverage. Consequently, the employee is presented a health benefit plans were the specifics of coverage have already been determined. Alternatively, if the patient purchases medical insurance directly from an insurer, the patient receives what in essence is an adhesion contract.

\textsuperscript{97} While the doctor or insurer maybe solicitous of the patient-beneficiary's wishes, hopes and desires, the decision to render medical care at present is entirely within the preview of the physician and insurer.

\textsuperscript{103} Garcia v. Coffman, 946 P.2d 216, 222 (NM 1997) referencing Mary Anne Bobinski, Autonomy and Privacy: Protecting Patients From Their Physicians, 55 U.Pitt. L. Rev. 291, 349 (1994) ("Several treatises on fiduciary law name the physician-patient relationship as a fiduciary one and the courts have tended to concur.") Moore v. Regents of Univ. of Cal., 793 P.2d 479, 479 (Cal. 1990).

\textsuperscript{104} ERISA's allowance for divided loyalties was predicated upon on the realization that to have sufficient business expertise to administrate the complicated employee pension plans the services of the beneficiaries' employers would have to be enlisted. 29 USC 1108 [c](3).
conduct was to be determined by the degree to which the fiduciary's decision was made in the presence of divided loyalty. When a fiduciary decision was made in the presence of undivided loyalty to the plan, Congress determined the fiduciary should be reviewed under the prudent person standard. In essence, ERISA's prudent person standard for breach of fiduciary duty is simply a restatement of the standard of review for a common law breach of fiduciary duty. However, when an ERISA "fiduciary has dual loyalties, his independent potential conflict of interests must be both intensive and scrupulous and must be discharged with the greatest degree of care that could be expected under all the circumstances by reasonable beneficiaries and participants of the plan." The greatest degree of care possible means even "a good faith belief, held by the trustees does not insulate them from charges that they have acted imprudently." Conversely, a fortuitous discretionary decision by an ERISA fiduciary that yields a solution in the best interest of the plan, is not a substitute for a detailed investigation of the highest possible care by the ERISA fiduciary. "Employers, for example, can be ERISA fiduciaries and still take actions to the disadvantage of employee beneficiaries, when they act as employers (e.g., firing a beneficiary for reasons unrelated to the ERISA plan), or even as plan sponsors (e.g., modifying the terms of a plan as allowed by ERISA to provide less generous benefits)."

In contrast to ERISA's pragmatic view, at common law dual loyalties are an anathema to the exercise of fiduciary duty. "Professor Scott's treatise admonishes that the trustee "is not permitted to place himself in a position where it would be for his own benefit to violate his duty to the beneficiaries." Prohibition of dual loyalties in its purest form eliminates conflict of interest, and hence [is] one protective mechanism against abuse of fiduciary power." As such, ERISA's allowance for dual loyalties in its fiduciaries therefore threatens "one of the Act's declared purposes to protect employees' interests in benefit plans."

105 29 USC 1104 (a)(1)(A) ("fiduciary shall discharge his duties with respect to a plan solely in the interest of the participants and beneficiaries and (for the exclusive purpose of: (1) providing benefits to participants and their beneficiaries; and (2) defraying reasonable expenses of administering the plan.)")

106 This is consistent with ERISA's incorporation of the Common Law of Trusts. See infra.

110 Pegram at 55

111 Id citing 2A Scott, §170, at 311.

112 Frankel supra note 71 at 811.

Pegram recognized that financial incentives, which by their nature have the potential to divide the loyalty of physicians, would lead to problematic legal analysis because of this dichotomy in the way in which ERISA statutorily allowed for dual loyalty and the common laws abhorrence of the same. The Court point out that in "every case charging breach of ERISA fiduciary duty, then, the threshold question is not whether the actions of some person employed to provide services under a plan adversely affected a plan beneficiary's interest, but whether that person was acting as a fiduciary (that is, was performing a fiduciary function) when taking the action subject to complaint." Realizing that the instant case under review had multiple fiduciaries [the HMO and its physician agents are ERISA statutory fiduciaries to the extent that they make discretionary decisions over medical services, and physicians are independently ERISA fiduciaries due to ERISA incorporation of the common law of trusts] to answer this question, the Court had to first parse out to which fiduciary the complaint was addressed.

The court concluded that the complaint did not address the medical decision-making by the treating physicians. "Herdrich does not point to a particular act by any Carle physician owner as a breach." Moreover, "at oral argument her counsel confirmed that the ERISA count could have been brought, and would have been no different, if Herdrich had never had a sick day in her life." Rather, the complaint was directed solely at the HMO for breach of "its duty to act solely in the interest of beneficiaries by making decisions affecting medical treatment" while simultaneously maximizing their own profits by inducing the physicians providers to make medical "choices to minimize the medical services provided." Thereafter, Justice Souter's discussion only contemplates the HMO's liability under ERISA for breach of statutory fiduciary duty. The court's silence on physician's common law obligations to their patients leaves open the possibility that fiduciary common law could be used as mechanism to regulate both physicians and HMO.

In regards to the HMO's liability for breach of fiduciary duty under ERISA, a two-prong analysis is required: first, was the HMO's incentive plan part of the ERISA plan [thereby triggering ERISA preemption] and second, was sufficient discretionary authority wielded by the

120 This potential is explored in detail in Parts III and IV infra.
HMO to make it a fiduciary under ERISA? The Court answered the first prong unequivocally "no''. "The HMO is not the ERISA plan''. Under Pegram, HMOs are merely contractors who implement the employer's benefits plan. Then, because the HMO was not an ERISA plan, the administration of the plan was not related to the plan itself and cannot trigger ERISA preemption of state tort or fiduciary law.

To determine whether fiduciary obligations to the patient-beneficiary were breached requires a more detailed analysis because there are potentially multiple fiduciaries [due to exercise of discretionary authority over plan assets]: the employer, the HMO, and the physicians who actually provide the plan benefits. First, the court contemplated whether the employer, as a fiduciary, breached its duty to the plan by contracting with the particular HMO. Pegram again concluded that the answer was "no''. An "employer's decisions about the content of a plan are not themselves fiduciary acts.''

Similarly, the incorporators of the HMO did not violate the employer's ERISA plan by setting up a financial incentive to control their physician's behavior. In other words, what the Court is saying is that neither the structure of the employer's benefit plan nor the structure or internal operations of the HMO acting alone or in concert with each other can result in breach of statutory fiduciary under ERISA.

Next, Pegram addressed the potential for breach of fiduciary duty by the HMO. The court divided the HMO's responsibilities as regards patient care into "eligibility decisions'', "treatment decisions'' and "mixed eligibility treatment decisions.''

Pure "eligibility decisions'' are those decisions which concern the particular condition or medical procedure for its treatment.

---

121 Pegram at 60

122 In analyzing ERISA fiduciary duty the court clearly contemplated the actions of the HMO, the actions of the physicians are mentioned only collaterally because the physicians in this particular case were owners of the HMO. However, the statutory fiduciary rules applied by the court to the HMO should be applicable to all non-owner physicians practicing in the HMO environment because under ERISA both the HMO and the physicians are conceptually fiduciaries because of their delegated discretionary authority to make decisions regarding plan assets. [Pegram at 79 ("physician employee would also be subject to liability as a fiduciary on the same basic analysis that would charge the HMO"). The physician would be a statutory fiduciary to the extent that the HMO is a statutory fiduciary.

123 Id at 60 citing Lockheed Corp. v. Spink, 517 U. S. 882, 887 (1996) ("Nothing in ERISA requires employers to establish employee benefit plans. Nor does ERISA mandate what kind of benefit employers must provide if they choose to have such a plan"). See also 29 U. S. C. §1109(b) ("no fiduciary liability for acts preceding fiduciary status").

124 Id at 60

125 Although the Pegram Court used different language than the appellate courts, the concept is same; in ERISA health care cases one must distinguish the utilization review decisions which are related to the plan, from the medical decisions which are not related to the ERISA plan.
covered by the plan. Pure eligibility decisions are clearly covered by ERISA because they are related to the plan. In contrast, "treatment decisions," are "choices about how to go about diagnosing and treating a patient's condition: given a patient's constellation of symptoms, what is the appropriate medical response." What the court termed treatment decisions are in reality medical decisions, which clearly would not trigger ERISA protection because they are too tenuously related to the plan.

In contrast, "Mixed eligibility treatment decisions" are those decisions predicated on "physicians' conclusions about when to use diagnostic tests; about seeking consultations and making referrals to physicians and facilities other than Carle's; about proper standards of care, the experimental character of a proposed course of treatment, the reasonableness of a certain treatment, and the emergency character of a medical condition." In essences, mixed eligibility treatment decisions are a hybrid of the eligibility and treatment decisions; in the business of health care delivery such decisions are termed "denial of care" decisions. Virtually all decision-making in delivering health care in a HMO environment – whether it be a medical directors decision that a condition is not covered, or a decision of a treating physician not to treat or refer a medical condition, would be classified as mixed eligibility treatment decisions by the Pegram court. To determine if mixed decisions are related to the ERISA plan, the court needed to locate mixed decisions on the spectrum of eligibility-treatment decisions. Notice was taken that "the common law trustee's most defining concern historically has been the payment of money in the interest of the beneficiary." Further "when Congress took up the subject of fiduciary responsibility under ERISA, it concentrated on fiduciaries' financial decisions, focusing on pension plans, the difficulty many retirees faced in getting the payments they expected, and the financial mismanagement that had too often deprived employees of their benefits." Accordingly, Pegram opined "Congress did not intend Carle or any other HMO to be treated as a fiduciary to the extent that it makes mixed eligibility decisions acting through its physicians."

However, the far-reaching implications of the Pegram decision can best be elucidated by looking at the converse situation. If mixed eligibility-treatment HMO administrative decisions are not covered under ERISA, then which HMO administrative decisions are covered? Based on the Court's discussion only pure eligibility decisions are related to the plan and hence covered

under ERISA. Importantly, because pure eligibility decisions are the only HMO administrative decision covered by ERISA, such decisions are the only ones that are entitled to ERISA preemption protection. After *Pegram*, if an HMO engages in administrative malfeasance, the ERISA preemption shield will only be available for those pure eligibility decisions. When a patient is harmed by denial of care decision, because such decision are no longer covered by ERISA, the HMO will not able to remove the case to federal court based on a question of federal law. In essence, while it is true that ERISA preemption protection is available to the HMO for pure eligibility decisions, *Pegram* has so narrowed the narrowed ERISA's preemption in the delivery of health care, as to make it an inconsequential form of protection.132

*Pegram* thus ratifies the current majority view of the appellate courts that ERISA's preemption shield is not available for administrative malfeasance in the delivery of health care.133 *DeLucia v. St. Lukes's Hospital*134 found that ERISA did not prevent a state court from deciding the liability of an insurer for allegedly providing suboptimal health care. *Crum v. Health Alliance-Midwest* 135 held that because the issue under review was the quality of health care, rather than erroneous denial of benefits, ERISA preemption was not triggered. The different roles of a HMO in health care delivery were distinguished in *Baumen v US Healthcare Inc.*136 While taking notice that the HMO was an ERISA administrator, *Baumen* found that quality [or alleged lack thereof] of health care provided by an HMO was a matter that was not preempted by ERISA. The Pennsylvania Supreme Court held in *Pappas v Asbel* that state negligence laws had "only a tenuous, remote, or peripheral connection" to ERISA plans and hence where not within

132 The courts may reach a different conclusion for a self-insured plan where the employer controls the HMO. Under such a fact pattern, the ultimate discretionary authority for a denial of care decision would lie with the employer and not with the plan. Because a business organization can not practice medicine, the employer's decision would lack a "treatment" component; hence the employer's decision would be more in the form of a pure eligibility decision. [Or alternatively a decision which wrongfully denied benefits.] *Herdrich*, 154 F.3d 362, 370 citing *Harris Trust and Sav. Bank v. Provident Life and Accident Ins. Co.*, 57 F.3d 608, 613 (7th Cir.1995). (After buying out a corporation, Campbell Soup terminated some of the purchased corporation's employee medical insurance coverage and installed Provident Insurance as the Third Party Insurer to watch over the plan's interests. In a subsequent suit for breach of fiduciary duty, after finding that Campbell was an ERISA fiduciary, the court "emphasized that it was Campbell, not Provident, who retained the right to direct and control the claims procedures and practices, as well as the right to decide all disputed and non-routine claims.")

135 47 F. Supp. 2d 1013 (CD Ill. 1999)

the scope of ERISA preemption. In Prudential Insurance Co. of America v. Doe, the Missouri district court found that a variety of tort claims, including intentional infliction of mental distress, were not preempted by ERISA. In fact, in the wake of Pegram there is evidence that the appellate courts are even more skeptical of ERISA preemption:

"Although state efforts to regulate an entity in its capacity as plan administrator are preempted, managed care providers operate in a traditional sphere of state regulation when they wear their hats as medical care providers. ERISA preempts malpractice suits against doctors making coverage decisions in the administration of a plan, but it does not insulate physicians from accountability to their state licensing agency or association charged to enforce professional standards regarding medical decisions. Such accountability is necessary to ensure that plans operate within the broad compass of sound medicine. We are not persuaded that Congress intended for ERISA to supplant this state regulation of the quality of medical practice. While it may impose some indirect costs on ERISA plans, the Court has considered such effects too tenuous to require preemption."

Pegram is unwilling to allow plaintiffs to sue for these mixed decisions under ERISA, and hence extend the ERISA preemption shield to administrative malfeasance in denial of care decisions, because the court believes that this just duplicates remedies already available in state courts:

"What would be the value to the plan participant of having this kind of ERISA fiduciary action? It would simply apply the law already available in state courts and federal diversity actions today, and the formulaic addition of an allegation of financial incentive would do nothing but bring the same claim into a federal court under federal-question jurisdiction. It is true that in States that do not allow malpractice actions against HMOs the fiduciary claim would offer a plaintiff a further defendant to be sued for direct liability, and in some cases the HMO might have a deeper pocket than the physician. But we have seen enough to know that ERISA was not enacted out of concern that physicians were too poor to be sued, or in order to federalize malpractice litigation in the name of fiduciary duty for any other reason."

138 12 F. Supp. 2d 925 (ED Mo. 1999)

139 Corporate Health Ins., Inc. v. Texas Dept. of Ins. 215 F.3d 526, 534-35, (5th Cir.(Tex.) 2000), citations omitted.

140 Pegram at 78
The most interesting comment is the reference to "... States that do not allow malpractice actions against HMOs." If allowing the plaintiff to sue under ERISA for these decisions only duplicates state law in states that do not bar litigation against HMOs is only duplicative, then the court is saying that there is no ERISA bar to these claims in state court, under state law, including state fiduciary law. Thus this decision calls into question whether there is any ERISA protection left for HMOs and their physicians, especially their administrative physicians and medical directors, except for the pure eligibility decisions, which are almost never at issue in plaintiff malpractice actions. Furthermore, the court's discussion of breach of fiduciary concerned only breach of fiduciary duty under ERISA, not state common law. Nothing in ERISA would prevent a physician from being sued in state court for breach of fiduciary duty.\textsuperscript{141} The problem for the HMO industry is once the physician is found liable for either medical malpractice or breach of fiduciary duty under state law, the HMO can be found vicariously liable for the physician's conduct if it employs the physicians or represents to the public that the physicians are the HMO's agent.\textsuperscript{142}

\textit{Pegram} thus appears to be a Pyrrhic victory for the HMO industry. In finding that mixed decisions of treatment and eligibility, the essence of a denial of care decisions, are not related to the ERISA plans, the shield of ERISA preemption is no longer available to HMOs that are involved in medical care decision-making. This emphasizes the key finding of the case: that the ERISA plan is the employer's designation of preferred benefits, not the medical administrative structure used to deliver the proffered benefits. This decision has no affect on the employer's benefits decisions. HMOs that choose to manage medical decision-making, directly or through branded medical groups, will have to deal with 50 different state laws concerning medical malpractice and breach of fiduciary duty.\textsuperscript{143} This will increase administration costs for these HMOs due to the need to absorb the increased liability.\textsuperscript{144} As HMO administration costs rise, the ERISA HMOs will loose their competitive advantage over non-ERISA HMOs.\textsuperscript{145} In short, we can not understand which the stock market reacted favorably to the ERISA HMO stock after the announcement of \textit{Pegram}.

\textsuperscript{144} ERISA authorizes the purchase of insurance.
\textsuperscript{145} Richards supra note 19
Pegram took notice that the judicial system was not the best form for the analysis of HMO decision making. Such decisions concern the rationing of medical care, which is difficult at best. Pegram at ____ "Since inducement to ration care goes to the very point of any HMO scheme, and rationing necessarily raises some risks while reducing others (ruptured appendixes are more likely; unnecessary appendectomies are less so), any legal principle purporting to draw a line between good and bad HMOs would embody, in effect, a judgment about socially acceptable medical risk."

Pegram at 48 ("But such complicated factfinding and such a debatable social judgment are not wisely required of courts unless for some reason resort cannot be had to the legislative process, with its preferable forum for comprehensive investigations and judgments of social value, such as optimum treatment levels and health care expenditure. "Congress is far better equipped than the judiciary to 'amass and evaluate the vast amounts of data' bearing upon an issue as complex and dynamic as that presented here."(Citations omitted)."

146 Pegram at ____ "Since inducement to ration care goes to the very point of any HMO scheme, and rationing necessarily raises some risks while reducing others (ruptured appendixes are more likely; unnecessary appendectomies are less so), any legal principle purporting to draw a line between good and bad HMOs would embody, in effect, a judgment about socially acceptable medical risk."  

147 Grumbach, Osmond, Vranigan, Jaffe, & Bindman, Primary Care Physicians' Experience of Financial Incentives in Managed-Care Systems, 339 New Eng. J. Med. 1516 (1998) ("arguing that HMOs that reward quality of care and patient satisfaction would be preferable to HMOs that reward only physician productivity").

148 Id.

149 Pegram at 48 ("But such complicated factfinding and such a debatable social judgment are not wisely required of courts unless for some reason resort cannot be had to the legislative process, with its preferable forum for comprehensive investigations and judgments of social value, such as optimum treatment levels and health care expenditure. "Congress is far better equipped than the judiciary to 'amass and evaluate the vast amounts of data' bearing upon an issue as complex and dynamic as that presented here."(Citations omitted)."

151 The Budget Reconciliation Act of 1997 specifically authorized the use of HMO structure for the delivery of health care under Medicare.

152 Id at 76 ("It would be so easy to allege, and to find, an economic influence when sparing care did not lead to a well patient, that any such standard in practice would allow a factfinder to convert an HMO into a guarantor of recovery.") Id at 77 (For "all practical purposes, every claim of fiduciary breach by an HMO physician making a mixed decision would boil down to a malpractice claim, and the fiduciary standard would be nothing but the malpractice standard traditionally applied in actions against physicians.")
Part II. Regulation of HMOs under State Fiduciary Common Law

Pegram destroyed the protection from state law that HMOs received under ERISA for administrative malfeasance in medical decision-making. "[W]e held that, in the field of health care, a subject of traditional state regulation, there is no ERISA preemption without clear manifestation of congressional purpose." Pegram had no desire to federal medical malpractice. Hence, Pegram clearly contemplated that state medical malpractice law would be used to regulate HMO health care delivery. However, the practice of medicine in an HMO environment is unlike practice of medicine in the fee-for-service [FFS] environment that honed and polished the tort of medical malpractice. Financial incentives under FFS directed physicians to provide too many medical services, and errors in health care delivery were assumed to be anomalous situation. Under FFS, the fraud that occurred involved the taxpayer and the insurer. In contrast, financial incentives in HMO health care delivery direct the physician to under treat patients. Fraud, i.e. wrongful denial of care for pecuniary gain, results in a fraud that "is more likely to make the patient the primary victim." HMO health care delivery has fueled the media battle over the incidence of errors in the delivery of health care.

HMO health care delivery creates unique mechanisms by which patients are harmed. The concept of injuring a patient by limiting the care options to the patient did not arise under FFS health care delivery, so the traditional tort mechanism for redressing medical injuries has not yet evolved to deal with the new mechanisms of injury ushered in by HMO health care delivery. True, given enough time, medical malpractice law could be modified to cope with denial of care issues. But, stretching a body of law predicated upon misguided or misapplied acts is not necessarily the best application of modern jurisprudence. This is especially true where there

158 To Err is Human: Building a Safer Health Care System, ed. LT Kohn, JM Corrigan, MS Donaldson, National Academy Press, Washington DC, 1999. (The well publicized "IOM report" concludes that as many as 98,000 Americans die each year due to errors which occur in the health care delivery system.) CJ McDonald, M Weiner, SH Hui: Deaths due to Medical Errors are exaggerated in the Institute of Medicine Report. http://jama.ama-assn.org/issues/v284n1/full/jcv00006.html (Disputing the validity of the methodology employed by the IOM) LL Leape: Institute of Medicine Medical Error Figures are not exaggerated. http://jama.ama-assn.org/issues/v284n1/full/jcv00005.html (Rebuttal to McDonald.)
already exists a well-formed body of fiduciary common law that is ideally suited to deal with medical errors arising from conflicts of interest. While breach of statutory fiduciary action under ERISA may no longer be used to redress patient harm, nothing in Pegram prohibits an action against a physician for breach of common law fiduciary duty.

While most jurisdictions have found physicians to be fiduciaries, none has appreciated that a physician may simultaneously be a fiduciary in more than one capacity. A physician's fiduciary duty applies whether the physician acts in the capacity of a treating physician or as an administrator (medical director), or both. Both types of physicians have intrinsic conflicts of interests, which could serve as the foundations for a breach of fiduciary duty action. Both types of physicians are omnipresent in HMO health care delivery. But the loyalties and obligation associated with the fiduciary relationships of the treating physicians and the medical directors are not identical. Despite wearing the cap of a corporate administrator, the medical director is nonetheless engaged in the practice of medicine whenever the medical director's decisions are based on information about and, affect the care of, a specifically identified patient. Because the medical director does not routinely examine patients – rather medical directors only examine a patient's medical record—it can be difficult to hold a medical director liable for medical malpractice. However, such medical administrative malfeasance can be easily handled under fiduciary common law.

1. Medical Practice and the Obligations of the Treating Physician

Ordinarily, the delivery of medical care is by a treating physician who will provide patient care either in a direct or indirect fashion. Direct patient care is care provided by a treating physician in a "face to face" fashion. Internist, surgeons, gynecologists and the like provide direct – hands on - patient care. In contrast, indirect patient care occurs when a treating physician acts in a consultant capacity. In this regard radiologists, pathologists, and anesthesiologists (collectively the "hospital-based physicians") all provide medical expertise required for specialized medical decision-making. Although patients rarely know the names of the hospital-

159 Medical malpractice arises when a physician negligently provides an independent medical judgment. But the clinical material that that underpins such a judgment must be gained from being at the patient's bedside. Thus, the majority of medical malpractice cases are ultimately incidental to a physical examination being performed. Hence, the physician or the physician's agent must at some point be at the patient's bedside. In contrast, breach of fiduciary law, the subornation the patient's interest to the physician's interest, can occur anywhere.

160 Moore v. Regents of Univ. of Cal., 793 P.2d 479, 479 (Cal. 1990).

161 This mirrors the distinction the United States Supreme Court drew between decisions that involve individuals and those that involve populations. See Londoner v. City and County of Denver, 210 U.S. 373 (1908) and Bi-Metallic Inv. Co. v. State Board of Equalization, 239 U.S. 441 (1915).

162 See note 185, supra.
based physicians who participate in their care, patients are generally aware of the existence of hospital-based physicians and that these physicians also provide care through specialized medical care services. After reviewing the raw data obtained from the patient, the hospital-based physicians memorialize their medical decision in consultative reports found with in the body of the patient's medical record, and in bills for services, just as the direct patient care providers do. Because the consultant physicians have rendered a medical judgment that affects the care of the patient, hospital based physicians have been subjected to traditional malpractice liability for their negligent decision-making.

Treating physicians are the archetypal "doctors" who enter into what the law terms the "doctor-patient" or "physician-patient" relationship. Traditionally, treating physicians have been proud of their individual autonomy, and have seen themselves as being the patient's advocate. The doctor's superior knowledge, as compared to the patient, leads naturally to paternal ideation, while the financial incentives under the FFS reimbursement system encouraged the physician to do everything possible for the patient. When a treating physician exercises such non-reciprocal power by rendering a medical judgment that affects a patient's health care, the physician becomes a fiduciary to the patient.

The medical decision itself is the end result of a reiterative five-step intellectual process. The steps are:

1) evaluation of patient's complaints and history,
2) gathering physical and laboratory information,
3) making of a medical decision,
4) re-evaluation of the outcomes of those decisions, and

163 Raw data as used herein contemplates the actual examination of a radiographic or pathologic examination.

164 Jenoff v. Gleason, 521 A.2d 1323 (1987)(Indirect providers have a duty to communicate unusual findings, as the communication is as important as the findings themselves.) Granado v. Madsen, 729 SW.2d 866 (Tx. 1987)(Indirect providers have a duty to provide informed consent.) Gooding v. St. Francis Xavier Hospital, 454 SE.2d 328 (SC 1995)(Anesthesiologist liable for breaking of teeth during intubation.) Hiers v. Lemley, 1991 Mo. App. Lexis 1500 (Pathologists are the ultimate arbitrators of a clinical diagnosis).

165 For the all physicians (direct and indirect patient care providers), the doctor patient relationship is created when the doctor render an independent medical judgment (i.e. a decision).

5) the collection of new information about the patient's altered condition.

A treating physician gathers information by taking a history from a patient, the patient's family, or speaking with a fellow health care provider (Step 1). Alternatively, information can be extracted from the patient's medical record. This oral and written information is supplemented through the "laying of hands" on a patient (i.e. physical examination) and through obtaining confirmatory laboratory studies (Step 2). Medical decision making results from the physician's mental thought process as the first two steps are reviewed under the aegis of the physician's training and experience (Step 3). Such decisions are two-fold, encompassing a diagnosis and a treatment recommendation. While diagnosis is often seen as the key operational decision by physicians, from the patient's perspective, the treatment recommendation, or lack of one, is more critical. It is this medical decision making that is the practice of medicine. Step 4, the evaluation of the outcome of the medical intervention, is the most critical because it closes the loop: if the outcome of treatment is not appropriate (i.e. the patient does not improve), the medical decision must be re-evaluated, and if the treatment was effective, the patient must be monitored to assure that the condition stays controlled. Step 5 begins the process again. Outcome evaluation may be based on follow-up lab tests, patient reports, and subsequent physical exams. These last two steps are most likely to be compromised in managed care because they requires the evaluation of what should be a "well" patient. In Herdrich, Shea, Lancaster, and Neade, a subsequent checkup of the patient would have shown that the initial diagnosis was incorrect, allowing time for proper diagnosis and treatment.

As a fiduciary, the common law imposes all of the general fiduciary obligations upon the treating physician, which include:

---

167 Society clearly views the make of a medical decision to be the dominant step in the practice of medicine. Gathering and affirmation of medical information has for sometime been an activity which could be delegated to a physician assistant or a nurse. The privilege of making a medical decision, however, remains an activity reserved to physicians in most states.

168 When a medical decision is total inappropriate due to failure to properly complete the first two steps (gathering and affirmation of medical information) the result is gross negligence. In contrast, the "garden variety" of medical malpractice results from failure to adequately reassess the impact of a medical decision, and to seasonally correct those which yield an aberrant and adverse outcome.

169 A major premise in the cost cutting rational of managed care is that after the first three steps in the practice of medicine, subsequent review is unnecessary as the patient is presumed "well". Managed care operates on the implicated assumption that the initial medical decision is presumed to have been a correct decision. If it is incorrect, it is often the patient who must convince the physician, sometimes in the face of fatal opposition, as in Shea and Lancaster.
(1) The requirement to disclose material information.\textsuperscript{170}

(2) The use of good faith and fair dealings with patients.\textsuperscript{171}

(3) Maintenance of confidentiality.\textsuperscript{172}

(4) Formal notice for the termination of the relationship\textsuperscript{173} and

(5) Undivided loyalty.\textsuperscript{174}

Breach of any of the general fiduciary duties by a physician was actionable at common law. The two most important of the general fiduciary duties for the physician are a duty of "loyalty" and "good faith and fair dealing." \textit{Shea} observed that the "duty of loyalty requires (a physician) fiduciary to communicate any material facts which could adversely affect a plan member's interests."\textsuperscript{175} Additionally, good faith and fair dealing imply that the physician-fiduciary may face a civil action for what is known customarily as "dishonesty". Hence, conduct...

\textsuperscript{170}\textit{Shea}, 107 F.3d at 628. \textit{Garcia}, 946 P.2d at 222 citing \textit{Kern ex rel. Kern v. St. Joseph Hospital, Inc.}, 102 N.M. 452, 456, 697 P.2d 135, 139 (1985)( "physician's affirmative duty to disclose material information continues beyond termination of the fiduciary relationship"); \textit{Hunter v. Brown}, 484 P.2d 1162, 1166 ("Whether the failure to disclose was willful or attributable to negligence is immaterial."). \textit{Hunter} 484 P.2d at 1167 (1971) citing \textit{Myers, Informed Consent in Medical Malpractice}, 55 Cal.L. Rev. 1396, 1407 (1967)("[a] physician is under an obligation to (a) make a full disclosure of all known material risks in a proposed operation or course of treatment except for those risks of which the patient is likely to know or (b) to prove the reasonableness of any lesser disclosure or the immateriality of the undisclosed risk.").

\textsuperscript{171}\textit{Varity}, 116 S. Ct. US at 1074-75. \textit{Hunter} 484 P.2d at 1166 ("At the same time, the physician must place the welfare of his patient above all else and this very fact places him in a position in which he sometimes must choose between two alternative courses of action."). \textit{Moore v. Webb}, 345 S.W.2d 239, 242; (Mo. 1961) citing 21 R.C.L. 379; \textit{Parkell v. Fitzporter}, Mo. Sup., 256 S.W. 239 ( "The physician has a duty to act with the utmost good faith."). \textit{Meinard v. Salmon}, 164 NE. 545 (NY 1928)

\textsuperscript{175}\textit{Shea} 107 F.3d at 628. The material fact referred to was the insurer's physician incentive plan.
which could potentially trigger liability for breach of fiduciary duty includes: "bait and switch" (where a nominal physician's services are actually provided by another; e.g. during surgical residency), and where a physician receives a profit in any form for the referral of a patient for an otherwise needed service (specifically laboratory work), and other forms of self-referral with built in "kickback" mechanisms).

Importantly, at common law the standard for review in determining whether a breach has occurred is from the patient's perspective. "When an ailing person selects a physician to treat him, he does so with the full expectation that such [a] physician will do his best to restore him to health." Along these lines Shea observed:

"Although the district court acknowledged Medica's duty of loyalty, the court felt the compensation arrangements between Medica and its doctors were not material facts requiring disclosure. We disagree. From the patient's point of view, a financial incentive scheme put in place to influence a treating doctor's referral practices when the patient needs specialized care is certainly a material piece of information. This kind of patient necessarily relies on the doctor's advice about treatment options, and the patient must know whether the advice is influenced by self-serving financial considerations created by the health insurance provider…. It is well accepted that patients deserve medical opinions about treatment plans and referrals unsullied by conflicting motives."

176 Such conduct may also trigger civil liability for the filing of a false claim under the Kennedy-Kasselbaum Bill [Pub.L 104-191]. See Richards, supra note 19 at 443.

177 Richards, supra note 19 at 451-2. The physician-fiduciary faces more than civil action for the unlawful acceptance of money. As the majority of states have adopted the Model Penal Code, many state have criminal codes finding the physician to be a fiduciary. Society has yet to declare where the line will be drawn with respect to corruption of the physician-fiduciary with respect to bribery. In this regard consider the HMO use of a withhold. A withhold is an incentive to keep the physician ever mindful of the cost of medical goods and services; specifically the withhold is to give the physician an incentive for denial of care. The withhold in monetary terms may be as much as 25% of the physicians salary. At what point is the withhold large enough to corrupt the physician's judgment sufficient to trigger criminal liability?

178 D.A.B. v. Brown, 570 N.W.2d 168, 170; (Minn. App. 1997)(With reference to kickbacks "Although the putative class attempts to frame the issue before us as one involving a breach of fiduciary duty, the gravamen of the complaint sounds in medical malpractice."

180 Shea 107 F.3d at 628

However, fact patterns that could form the basis of a medical malpractice action could be used to form the bases of a breach of fiduciary duty. Neade concluded that under appropriate circumstances an independent breach of fiduciary duty cause of action could arise from a common set of facts with a medical malpractice claim.\textsuperscript{182} The benefit of pleading a case as breach of fiduciary duty rather than medical malpractice is that breach of fiduciary duty may not be subject to medical malpractice caps on recovery.\textsuperscript{183} This potential to avoid a medical malpractice cap has not gone unnoticed: "[p]laintiffs no doubt crafted craft Count V [involving actual and constructive fraud] with an eye on avoiding this cap."\textsuperscript{184} Since much of what constitutes sufficient grounds for medical against a treating physician can be rephrased as a breach of fiduciary duty, a fair question is just how does one differentiate ordinary or "garden variety" medical negligence from a breach of fiduciary obligations?\textsuperscript{185}

Breach of fiduciary duty and medical malpractice can be differentiated by whether the physician has reviewed the raw data [e.g. actually examined the patient] and whether medical decision was well thought out. Medical malpractice ultimately turns on a physician's collection and review of the patient's raw data [step 2 above] and the rendering of a medical decision [step 3 above]. Implicit in Step 2 is that the physician or physician's agent must come into physical and temporal proximity to the patient. Whether the physician lays his hands on the patient, reviews the patient's radiographic images, or examines the patient's tissue under a microscope, the treating physician's judgment is predicated on an examination of the patient's raw clinical data in a timely manner. The failure to examine the patient properly or, worse, ignoring the patient's raw data, is what forms the bases of a medical malpractice action. Medical malpractice turns on a poorly scientifically rationalized decision; ie a "sloppy" decision. Hence a mistaken diagnosis, incompetent surgery or error of omission in the face of adequate information could be malpractice.

In contrast, a physician's breach of fiduciary duty to a patient does not require a close temporal physical nexus to the patient to occur. In fact, the physician's decision to violate a fiduciary obligation may occur long before\textsuperscript{186} or long after\textsuperscript{187} the formation of the doctor-patient

\textsuperscript{182}Neade v. Portes, 710 N.E.2d 418 (Ill.App. 2 Dist. 1999)

\textsuperscript{183}Of course there is a downside to pleading a case breach of fiduciary duty against a physician. Such an action may not be covered by medical malpractice insurance, and at present it would be a rare physician who would have appropriate insurance coverage for breach of fiduciary duty. Judging by the reluctance of physicians to obtain stop-loss insurance as a contingency to deal with the business risks of manage care medicine, it will be sometime before the medical community sees the value in insurance for breach of fiduciary duty.

\textsuperscript{184}Lancaster 958 F.Supp. 1138 at 1150

\textsuperscript{185}Varity 516 US at 514. This is a hypothetical situation, which was specifically commented upon by the court.

\textsuperscript{186}For example, the physician's conscious decision to receive all of the withhold money under a capitated contract could occur before the physician ever meet any HMO patients.
relationship. Nor does breach of fiduciary duty require that the treating physician review the patient's raw data. What breach of fiduciary duty does contemplate is that an affirmative decision is made to subordinate the patient's best interest to those interests of the physician or some third party. Hence a choice not to do a necessary test, collect adequate information or to call in a specialty surgeon because of the cost of the tests would ultimately reduce the income of a physician or an insurer would be a breach of fiduciary duty. Notice that breach of fiduciary duty occurs regardless of how well the science of medicine is rationalized. In fact, a well-rationalized scientific decision may give an index to the degree to which the physician has reached to subordinate the patient's interest.

We realize that an "invisible hand" has always modulated the decisions of physicians regardless of the reimbursement mechanisms or the presence of ERISA protection. While in the managed care environment there are incentives to reduce care, it must be remembered that traditional fee-for-service (FFS) reimbursement provided incentives for excess and hence unnecessary care. With FFS medicine the issue of breach of fiduciary duty generally did not arise because the physician received pecuniary incentives to re-evaluate the patients. That is the FFS reimbursement system rewarded physicians for increasing the volume of care given. The financial incentives under FFS medicine were such that a physician had no reason to subordinate the patient's interests to the insurers bottom line. Thus in the FFS environment, patients were harmed when a physician subjected the patient to unnecessary tests, medical treatments or surgery. Medical malpractice was honed to deal with harm caused by excessive and some times unneeded medical care that occurred as a discrete event. In contrast, the purpose of managed care is to ration or deny medical care. In managed care medicine a patient may be harmed by a denial of care decision made by a physician the patient does not even know. Moreover, managed care as we have discussed above systematically dissuades a treating physician from executing steps 4 and 5 in the reiterate medical practice cycle. These features of

---

187 For example, a physician's decision to breach a patient's confidentiality may occur long after the formal doctor patient relationship has come to an end.

188 In the managed care arena the physician subordinates the patient's interests to the interests of the physician [e.g. so that the physician receives the maximum bonus or withhold] and the insurance carrier which attempts to limit expenditures. See Richards supra note 4.

189 Adam Smith The Wealth of Nations (1776)

190 Under managed care, physicians may reduce care either flat out denial or as the Shea line of cases illustrates, by failure to re-evaluate the patient properly. That is managed care provides physicians with financial incentive not to proceed to step 4 in the decision algorithm for the practice of medicine. See supra discussion of the nature of medical practice.

191 Step 4; see supra discussion of the nature of medical practice.

192 Elliot S. Fisher, H. Gilbert Welch, Avoiding the Unintended Consequences of Growth in Medical Care, JAMA 281:446-453,449-50 (1999).
managed care medicine can frustrate the application of traditional tort law because they seek to change the standard of care. Fiduciary law is ideally suited to provide remedies where a fiduciary is systematically corrupted out of the presence of the beneficiary.

2. Medical Practice and Obligations of Medical Directors

A medical director is a physician who acts as an administrator and oversees medical care provided by an organization. Conceptually, a medical director should exist whenever a business organization provides medical services on a contractual basis, as state laws generally limit the extent to which corporations may engage in the practice of medicine. Examples of such corporate provided services include 1) staffing emergency rooms or occupational medical care clinics, 2) medical research involving human subjects, and 3) the administration of insurance. Many large corporations have more than one medical director, with one at the corporate office and one for each region/plant. These corporate medical director positions existed long before managed care entered the health care arena.

Medical directors practice medicine. In the spectrum of the practice of medicine, the medical director's form of practice most closely resembles the hospital-based physician's practice, as the medical director does not provide direct patient care. In contrast to the hospital-based treating physician, however, the medical director is invisible to the patient, providing neither a consultative report nor a bill. In rendering a denial of care decision the medical director employs, with minor variation, the same reiterating five-step intellectual thought process employed by the treating physicians. But the medical director will only review the filtered reports of the treating physicians and the patient's medical records. In actual practice, many of these "denial of care" decisions are not made by a physician but are delegated to nurses.

193 Richards, supra note 19 at 445. The prohibition on corporate practice of medicine dates to the 1920's. "Interestingly, [restriction placed on the practice of medicine] evolved from laws intended to prevent the practice of law by corporations. Their purpose was to protect the independence of the professional's judgment from the pressures triggered by making money for the stockholders of a business."

194 This article focuses on the medical director within the insurance industry.

195 Procedurally, the medical director does not collect and affirm clinical information personally as a treating physician would [i.e. the medical director does not personally execute Steps 1 and 2 above]; rather the medical director generally relies on the information gathered by the treating physicians. But after making a medical decision involving a patient care [Step III] the medical director collects further information [Step IV] and takes remedial decisions [Step V]. The major difference between a treating physician's medical practice and medical director's medical practice is the latter generally makes a decision about a population of patients rather than individual patients. However, whenever the medical director makes an individual patient decision, the medical director's practice of medicine is identical to the treating physician's practice. Accordingly, where a medical director intervenes in a particular patient's care, the medical director should be as liable for treatment decisions as the treating physician.
or other physician extenders to be made by standard protocols. Legally, however, as only physicians may make medical decisions in most states, the responsibility for a nurse or physician extender's medical decision flows back to the physician.

Form, not substance, in the practice of medicine is what differentiates the medical director's practice of medicine from the treating physician's practice. Key to understanding liability of HMOs is the fact that their medical directors' decisions are medical decisions, while the medical director's administrative authority, exercised on behalf of the HMO, makes the HMO vicariously liable for the decisions. The medical director directly influences patient care when a particular patient is denied care upon the request. When a medical director makes a decision which determines (at least in part) which providers, what services, and what products will be potentially available to all patient under the corporate contract with the employer, the medical director indirectly influences the care of patients. In some plans, the medical director will even change medications ordered directly, without operating through or with the knowledge of the treating physician. In short, the medical director has authority over both treating physicians and their patients.

By exercising control over a patient's medical care, either directly or acting through a treating physician, the medical director becomes a common law fiduciary, independent of a direct physician-patient relationship. Unlike a treating physician, who at least when operating in the traditional FFS environment did not have to answer to a corporate master, the medical director of necessity renders medical decisions under a requirement of dual loyalties. The dual liabilities of HMOs, therefore, can have a direct bearing on the medical decision which determines which providers, what services, and what products will be potentially available to all patient under the corporate contract with the employer. In some plans, the medical director will even change medications ordered directly, without operating through or with the knowledge of the treating physician. In short, the medical director has authority over both treating physicians and their patients.

196 An HMO usually does the initial screening for denial of care on the basis of an opinion render by a masters-level nurse, or occasionally by a registered nurse. The nurse generally denies care because it is deemed unnecessary and/or not covered by the patient's policy. Routinely, the nurse's decision may be appealed to the medical director whose decision is generally final. See Jass v. Prudential Health Care Plan, 88 F.3d 1482 (1996) 197 In California, if a physician wishes to supervise a physician assistant, the supervising physician is required to have a written "Delegation of Medical Services" document on file. Medical Board of California Action Report. (July 1998) at 4.

198 Murphy v. Board of Medical Examiners of the State of Arizona, 949 P.2d 530 (1997) ("There is no other way to characterize Dr. Murphy's decision: it was a "medical" decision.").

199 There are no rituals or talismanic expressions which create a physician patient relationship. Objectively, the creation of the physician-patient relationship occurs when a contract has been formed; that is, when the patient asks for assistance and the physician accepts the patient. Davis v. Weiskoff, 439 NE.2d 60 (Ill. 1982); Clanton v. von Haam, 340 SE.2d 627 (Ga. 1986). But this begs the question how the parties to such a contract recognized the process of offer and acceptance. From a practical point of view, the physician and patient recognize that a relationship is formed when the physician offers an independent medical decision or judgment, and the patient relies on the physician's decision. This reliance is the basis for the physician-patient relationship and the accompanying fiduciary obligations. For many cases, the relationship arises from status relationships, such as the physician agreeing to treat all patients in a health plan, or to treat all patients entering an emergency room.
loyalties of the medical director create a situation that is intrinsically antagonistic to
the fiduciary doctor-patient relationship, which at common law demanded undivided loyalty.200
Nowhere is the tension between the dual loyalties of the medical director clearer than in making
the decision to deny medical care. Daily, medical directors must make the difficult decision of
whether to deny care and hence favor the corporate master, or provide the patient a treatment
with a low probability of success at a high cost and hence favor the patient.201

In practice, what distinguish the medical director's decisions from the treating physician's
decisions are three factors. First, the medical director's prime interests are the administration of a
group of patients rather than the care provided to an individual patient.202 Second, the medical
director's decision is final,203 and consequently such decisions are more important to the patient
than the treating physician's decision. And third, the medical director only examines a patient's
medical record, never the patient. Unlike treating physicians, when a patient is harmed by a
medical director's decision-making results from wrongful denial of care and the patient sustains
bodily injury, the patient may not have a "garden variety" medical malpractice remedy against
the medical director.

If the patient-plaintiff filed a traditional medical malpractice action against a medical
director, the plaintiff would face several hurdles. The plaintiff would have to demonstrate a
doctor-patient relationship. Other than the opinion in Murphy,204 there is not clear or case law
that places a medical director in a doctor-patient relationship. Also, a plaintiff suing the medical
director would have a causation problem. Arguably, the treating physician's conduct might be
viewed as an independent act which "cut off" the medical director's liability. In contrast, if the
medical director was sued for breach of fiduciary duty all that would have to be shown is that the
medical director's decision impacted that plaintiff and in forming that decision the medical
director subordinated the patient's interest. The latter simple because the medical director of
necessity operates in a world of divide loyalties. After the fact, when a patient has sustained an
injury because a medical service was denied, it will be very difficult to demonstrate that the
medical service was unnecessary where it is also shown that the medical director was serving
more than one master.

201 If the treatment under review by a medical director had a high probability of providing a cure (i.e. it was well
accept by the medical community as appropriate) then it is assumed that the issue of denial of care would not arise.
202 See infra, discussion of the physician's fiduciary obligations to their employers.
203 For ERISA self-insured plans, medical care and decisions made an insurer-administrator can ultimately be
appealed directly to the employer.
204 Murphy v. Board of Medical Examiners of the State of Arizona, 949 P.2d 503 (1997).
In short, the medical director is actively engaged in the practice of medicine, and, like the treating physician, the medical director may make bad decisions based on either incompetence (that is medical malpractice), or the medical director may make decisions that subordinate the patient's interests to the plan's interest (that is breach of fiduciary duty). When a physician assumes a medical director's position, he/she does not cease to be a physician. The common law fiduciary duties are no less onerous on a physician because the physician functions as a medical director rather than a treating physician. The importance of the medical director's position for purpose of litigation involving a HMO is the ubiquitous nature of the medical director for the position exists whenever a corporation oversees medical services. As such, the medical director position is the legal nexus between all HMO plans and their patients and should provide a common path for regulation, irrespective of the organizational structures of the plan. The medical director's position serves as a portal for assigning liability to virtually any business organization for breach of fiduciary duty based upon administrative malfeasance.

3. Damages for Breach of Common Law Fiduciary Duty

Under the common law, remedies for breach of fiduciary duty were equitable "endeavor[ed] as far as possible to replace the parties in the same situation as they would have been in, if no breach of trust had been committed." Historically, equitable remedies were differentiated from legal remedies. "Money damages are, of course, the classic form of legal relief" whereas equitable remedies are classically "injunctions or restitution." The issue than is when a patient sustains injury due to medical director's or treating physician's breach of fiduciary duty what is the appropriate relief for such patients.

A. Equitable Relief for breach of Fiduciary Duty

Equitable relief is "limited to those remedies that were typically available in equity, i.e. injunctions, mandamus and restitution." Classically then, equitable remedies were non-

205 Baltimore Sun 6/11/98 at 6B "The General Assembly defeated a bill to put medical directors of HMOs under the same disciplinary scrutiny as doctors." Subsequently, Maryland has placed medical directors under the control of the insurance board.

208 Id.

pecuniary orders or awards which are granted in order to make an aggrieved party "whole." A listing of the more common equitable remedies available for breach of fiduciary duty include:210

1. Injunctive and declaratory relief.

2. Pre judgment interest & attachment of assets.

3. Forfeiture of beneficial interest by breaching fiduciary.

4. Imposition of a constructive trust.

5. Compulsion of payment owed

6. Restitution of misappropriated funds.

Implicit in this enumeration of equitable remedies is that to be effective in providing relief for breach of fiduciary duty the contents of the trust must not only to be identifiable, but the contents of the trust also must be recoverable or replaceable. That is, for equitable relief to make the party "whole," the property in question needs to be fungible. Not surprisingly, equitable remedies have worked well where a fiduciary has defrauded a trust, such as a pension fund or where the trustee has breach the confidence of the beneficiary for profit211, because in both of these circumstances the asset in question (money) is both seizable and fungible. However, equity cannot, by itself, make whole a party who has sustained either bodily injury or wrongful death because judicial fait cannot replace life or limb because neither life nor limb tangible or fungible. Accordingly, in the HMO environment, when breach of fiduciary duty leads to wrongful death or bodily injury if the remedies are limited to those found in equity, then a worthy plaintiff's remedies are tantamount to no remedy at all.

210 This compilation was extracted from FM Dougherty 98 ALR 705 (1997) What constitutes "other appropriate equitable relief" under 502(a)(3)(b), 502(a)(5)(B) of the Employee Retirement Income Security Act (29 USCS 1132(a)(3)(B), 1132(a)(5)(b)) which may be obtained to redress violation or to enforce provisions, of [the] Act.

211 Coming regulations promulgated under authority of the Kennedy-Kasselbaum Act [Pub. L. 104-196] are expected to have civil and criminal penalties for breach of confidentiality associated with data contained in electronic medical record that are mandated by this Act.
B. Compensatory Monetary awards for breach of Common Law Fiduciary Duty

The common law of equity's aversion to granting monetary awards for breach of fiduciary duty has never been absolute.212 Under many situations an "equity court could "establish purely legal rights and grant legal remedies which would otherwise be beyond the scope of its authority."213 While equity recognized that monetary awards only need to be calculated with mathematical precision,214 monetary awards were often need to "make the victims of the breach whole".215 Accordingly, compensatory monetary awards have been provided for breach of fiduciary duty arising under protean circumstances.216 Although money may not make the victim of bodily injury or wrongful death whole, money is a more appropriate form of equitable relief were there is bodily injury or wrongful death.

If compensatory monetary damages are to be awarded for patients injured by a medical director's breach of fiduciary duty, then the question arises how should such damages be calculated. We would favor determination of monetary awards for administrate malfeasance resulting in bodily injury or wrongful death to be determined in a manner analogous to tort law,217 because such a policy would minimize the need to redress a medical malpractice action as a breach of fiduciary duty for treating physicians. Conversely, even if a medical malpractice case were redressed as a breach of fiduciary duty cause of action, by granting a monetary award in a manor similar to medical malpractice, the discrepancy in awards would be minimized. Such a policy would also make a medical director liable to the same extent as a treating physician for a

213Mertans 508 US at 256 quoting 1 J. Pomeroy, Equity Jurisprudence @ 181, p. 257 (5th ed. 1941).
215Mertans 508 US at 264 (Dissent of J.White)
217 The common law also allowed for the potential granting of punitive damages. Although many older cases state that courts lack power in equity actions to award punitive damages, this increasingly [is an] antiquated view." [Schoenholtz v. Doniger, 657 F. Supp. 899, 913 (SD NY, 1987) (citations omitted.)] In principle, we would favor the awarding of punitive damages in egregious cases where a physician's breach of fiduciary duty led to bodily injury. However, a discussion of punitive damages for breach of fiduciary duty is beyond the scope of this communication. See also Weems supra note 20.
similar injury. Moreover, having a strong deterrent in place to check the medical director's behavior would serve to remind the medical directors that they are first physicians and their decisions have the potential to cause real physical harm.

Conclusions

Physicians as primary treating physicians are liable when their decisions violate state medical malpractice standards or their state common law fiduciary duties. *Pegram* makes clear that physicians who also have administrative roles in HMOs are not covered by ERISA when making medical decisions and thus are also subject the same liability as primary treating physicians. To the extent that treating physicians and medical directors are controlled by an HMO, or are found to be ostensible agents of an HMO, the HMO will share in their liability. Thus HMOs and other managed care organizations that attempt to control medical care decisionmaking will have increased liability through the liability of their physicians. This should create pressure to improve patient care. At the same time, it will give plans that stay within the court's notion of the reach of ERISA an economic advantage through continuation of the ERISA preemption of state law regulation. Such plans must give up their control of physician decisionmaking, which reduces their ability to reduce costs, and must not hold the physicians out as their agents, which can hurt them in marketing. If the cost of litigation is too high, then their will be an incentive for plans to forgo the benefits of managing physician decisionmaking. Plans that choose their route will not give up cost controls. They will shift the cost of insurance to the physicians through capitation agreements that do not involve the plan in the decisions about individual patients. If they then through forgo medical director review of the decisions, i.e., forgo quality control, they will escape state liability by explicitly ignoring quality of care issues. This threat must be addressed by state insurance regulators to avoid the paradox of avoiding liability by giving up quality control.

---

218 Recently, Petrovich v. Share Health Plan of Illinois, Inc., 1999 WL 773524 (III. 1999) has extended Lancaster's allowance for vicarious liability to reach all health plans. In Petrovich, the plaintiff alleged the physician was negligent in making a proper referral. After experiencing intra-oral pain, the plaintiff went to see his PCP, who then referred the plaintiff to an ENT specialist. Although the specialist recommended further work-up, in what is at present a recurrent pattern of conduct for PCPs in the managed care environment, the PCP over ruled the specialist and clinical evaluation was terminated. Over a year latter, the plaintiff was found to have carcinoma of the tongue, which had spread into the pharynx and thereby, compromised any potential curative surgical procedures. The court concluded that absent ERISA preemption protections, HMO "may be held vicariously liable for the negligence of its independent-contractor physicians under both the doctrines of apparent authority and implied authority." This HMO liability is not based upon improper administrative action of the HMO, but rather the conduct of the physician providing medical service for the plan. ERISA preemption applies to harm to patients as a result of the administrative action. In contrast, delivery of medical service is not covered under ERISA. Thus, to the extent that a plan integrates administrative and medical services, it will be vicariously liable for the negligent of the medical service providers. This should extend to all plans with "branded" medical groups or other forms of integration of medical and plan administrative functions.
End Notes
