COMMISSIONERS:

- J. M. BREAUX, President,  
*Houma, Terrebonne Parish, La.*
- BEN. MICHEL,  
*Pilot Town, Plaquemines Parish, La.*
- CLEMENT STORY,  
*Violet, St. Bernard Parish, La.*
- H. H. HARVEY,  
*Harvey, Jefferson Parish, La.*
- A. E. HOFFMAN,  
*Thibodaux, Lafourche Parish, La.*

**438553**

THIRD BIENNIAL REPORT  
OF  
OYSTER COMMISSION OF LOUISIANA.

*To His Excellency, Jared Y Sanders, Governor, and to the General Assembly of the State of Louisiana:*

The Oyster Commission of Louisiana begs leave to submit this, its third biennial report, for the period extending from March 1st, 1906, to April 1st, 1908.

The oyster industry of this State has during the past two years been enjoying a healthy and expansive growth. For a time this growth assumed the proportion of a "boom" which, fortunately for the State and the industry itself, was very short-lived, many investors embarking in the business with but little knowledge, or insight, of the methods of oyster culture, and failing in brief time in their enterprises, all of which served to no good purpose in inviting capital and labor backed by former knowledge and experience, in the oyster industry.

With the resumption of normal conditions, it was not long before both local and outside capital began to manifest a decided interest in the industry. This will be observed by the following statistics, showing the total acreage of land leased at \$1.00 per acre per annum, by this Commission for the State during the past two years, to-wit:

March 1, 1906 to April 1, 1908:

No. of Leases, 534.

No. of Acres, 7,173.25.

Aggregate of leases in effect to date:

No. of Leases 1,692.

Acreage 22,134.99.

## THIRD BIENNIAL REPORT OF THE

## TAX COLLECTIONS.

Prior to the adoption of Act No. 178 of 1906, the method of collecting the 3 cents privilege tax levied on every barrel of oysters fished from the waters of this State, was inefficient, the collection being made by the tax-collectors of the various Parishes, with whom the inadequacy of compensation in making these collections did not justify their employing deputies to do this work, and this, in our mind, has always appeared to have been the only effective means of making these collections. By virtue of the provisions of the last oyster law, the Commission was itself authorized to make these collections, and in furtherance of this object, it has appointed a traveling tax collector and auditor, whose duties consist in a monthly visit to all oyster canneries and shops, for the purpose of tax collection, in accordance with books and accounts there found and examined by him. These canneries and shops are also required to send sworn monthly statements to the Secretary, showing the number of barrels they have handled during the preceding month, and the falsity of any such statement is punishable as perjury.

This feature of the Commission's work has proved satisfactory in every way and we can vouchsafe the assertion that every dollar of oyster tax has been collected by this Commission. The marked improvement in tax collections will readily be seen by referring to the statistics in the Secretary's report, entitled, "Revenues of Oyster Commission of Louisiana, from March 1, 1906, to April 1, 1908," under the heading, or column, "Three Cents Privilege Tax."

## OYSTER CROP STATISTICS.

There has been a marked increase in the sale of oysters from leased bottoms during the past two years, canning factories in several localities seeking this class of product almost exclusively. It cannot be said that the natural oyster reefs of this State are in danger of depletion. Every measure of precaution tending to preserve this great right of commonry has at all times been exercised by the Commission. While it is difficult to state the proportion, more oysters have been fished for consumption from natural than from private beds.

The following figures will help prove the steady growth of the oyster industry in this State, to-wit:

| Year.     | Catch in barrels. |
|-----------|-------------------|
| 1903..... | 472,191           |
| 1904..... | 540,192           |
| 1905..... | 673,060           |
| 1906..... | 765,002           |
| 1907..... | 933,960           |

It will be observed that the crop has just doubled in the past four years and judging from the past yearly rate of increase, the million barrel mark should be reached at the end of this year, which on the basis of a 3 cents tax per barrel, will bring a revenue of \$30,000 per annum to the State.

A further positive sign of improvement is also evident from the fact that six new canning factories have located in this State in the past two years. These establishments can oysters in the winter time, distributing their product all over the country, and many of them can shrimp, figs and vegetables in spring and summer, thereby giving employment to a large number of people at all times during the year. We respectfully refer you to the Secretary's report for further data on this subject.

#### STUDY OF OYSTER LIFE.

The Commission has during the past two years assisted in the biologic work being done by the Bureau of Fish and Fisheries, a branch of the U. S. Department of Commerce & Labor. The work, which consists in a general study of oyster life and the natural conditions surrounding it, was begun in December, 1903, under the direction of Dr. H. F. Moore and Dr. T. E. B. Pope, both eminent biologists. The Commission has at all times taken an active interest in the experiments conducted. While the investigation has not been completed, reports have been issued from time to time by these scientists which the Commission has printed in pamphlet form and distributed as interesting literature among the oyster people.

This work will be finished this fall and a very interesting report of the oyster life of Louisiana will be published and serve to good purpose among nearly all oystermen, who have come to realize that science is an important factor in the successful pursuit of this business. In this report will be found an interesting paper by Dr. Moore on this subject.

The condition of the oysters during the past two years has been better than during the two years preceding. Coupled with this fact, the prices have increased all along the line, the fishermen who sell private bed oysters enjoying an era of prosperity. The local demand for oysters has increased but little, but the fame of the Louisiana oyster has materially increased the demand for the product from nearly every inland state in the Union. As a consequence, a large volume of business has been done by the canneries and raw shops.

#### BAPTISTE COLLETTE GAP.

In the lower end of the Parish of Plaquemines, the admixture of river and gulf waters render conditions ideal for proper oyster culture. Before the decision of the Louisiana-Mississippi boundary suit, over one half of the supply of Louisiana oysters came from this territory. One of the most notable sections of this productive territory is known as the "Salt Works," located about 75 miles below the city of New Orleans, on the left bank of the Mississippi River, and adjacent to the waters of Grand Bay, California Bay and Quarantine Bay. A colony of several hundred Austrian fishermen having settled in this locality some years ago, valuable oyster bottoms were made of heretofore barren lands. The receipts for tax collections show an appreciable decrease in oyster shipments from this territory in the past five years. The cause is traceable directly to the over-supply of fresh water which comes from the river through one of its natural outlets, known as "Baptiste Collette Gap," a stream about 300 feet wide and 18 feet deep at its aperture. Until a few years ago, the water from this gap caused very little, if any trouble, to the oysters, but in time it has attained a width and depth which permit the flow of an immense volume of silt-laden

water, all of which is discharged upon these valuable beds, destroying over half of the set and in some instances burying the oysters in several feet of sand.

Through the combined efforts of the Oyster Commission of Louisiana, the Grand Prairie Levee Board, the State Board of Engineers and the fishermen of the locality in question, an attempt was made two years ago to effect a closure of the gap. The funds guaranteed for the time being proved insufficient and the work, though begun, had to be abandoned by reason of the further fact that the high stage of the river interfered with the work.

Needless to say, should these waters be permitted to flow through Baptiste Collette Gap, in the course of five years vested interests representing several hundred thousand dollars will be abandoned and the State will have lost one of its most profitable sources of revenue.

For these reasons, we urge and recommend that the Legislature make a special increase in the appropriation allowed the Commission, specifically setting aside a certain sum for the purpose of aiding in the permanent closure of Baptiste Collette Gap.

#### PATROL FLEET.

The last session of the Legislature laid aside a special appropriation for the purchase of boats and equipment by the Commission, by reason of which fact, we have been able to improve our patrol system, both in point of number and efficiency. The fleet used for patrol purposes by this Commission consists of the following vessels:

|                   |                           |  |            |
|-------------------|---------------------------|--|------------|
| 1. "LOUISIANA,"   | 40 H. P. Gasoline Launch, | 61 ft. in length by 12 ft. beam, cost..... | \$7,993.61 |
| 2. "BATON ROUGE," | 35 H. P. Gasoline Launch, | 51 ft. in length by 12 ft. beam, cost..... | 3,200.00   |
| 3. "NEW ORLEANS," | 40 H. P. Gasoline Launch, | 51 ft. in length by 13 ft. beam, cost..... | 7,500.00   |
| 4. "NITA,"        | 7 H. P. Gasoline Launch,  | 21 ft. long by 6 ft. beam, cost.....       | 540.00     |

While it may appear from this summary that the Oyster Commission is provided with a system of patrol sufficient to meet the purposes for which it is required, we wish to impress Your Excellency and the Legislature with the fact that the Commission's fleet, as presently constituted, is just barely sufficient to maintain an efficient patrol of the waters adjacent to the Louisiana-Mississippi boundary line alone. To any one familiar with this territory, the idea of a perfect patrol system seems almost impossible, but the Commission has been able to break up the poaching practices heretofore common in those waters only by means of the use of its entire fleet, leaving the balance of the vast Louisiana oyster territory unprotected. While the need for vigilance is present largely in the Louisiana-Mississippi territory, it is nevertheless a noteworthy fact that patrolling in other parts of the State has produced its good results. A large proportion of the people interested in oyster culture, hope for a continuance of this patrol protection of property which from the peculiar nature of its habitat, needs every safeguard thrown about it to insure it against loss.

It is, therefore, apparent that an increase in the number of patrol vessels of the Commission is urgently needed, which cannot be accomplished with the special fund appropriated for this purpose under the present provision of the oyster law. By virtue of Act 178 of 1906, the sum of \$9,000.00 is specially laid aside for "boats and equipment," and we submit that this sum will be largely inadequate to permit of the purchase of one, or more, vessels and to meet the expenses of the operation of the entire fleet, including repairs.

We recommend that the Commission's boat and equipment appropriation be increased by amendment to \$12,000.00.

#### LOUISIANA-MISSISSIPPI BOUNDARY.

The decision of the United States Supreme Court, rendered March 5, 1906, in which this State was given title to the valuable oyster beds in Mississippi Sound and adjacent waters, has doubtless proved a source of benefit to the State, the fees of special counsel employed by the State in this litigation having already

been two-thirds paid from funds derived from the oysters produced in this territory alone. (See Secretary's report for figures).

The decision of the suit aforesaid carried with it no mandatory provision relative to the staking, or buoying, of the boundary line established in its decree, apparently leaving this all-important phase of the case to be settled by the two States. It is to be regretted that the State of Mississippi at its recent session of the Legislature, refused, though urged by its Governor, to appropriate any sum of money with which to meet her proportionate share of the expense incident to the buoying of the line. No provision has been made by our Legislature for the means whereby this Commission in behalf of the State might have this all-important work done. Needless to say, a comprehensive and effective patrol of this territory will ever be a difficult matter until the line is marked off with such buoys, as will render it clear and distinct to both alien fishermen and officers of the Commission. It has not infrequently occurred that inspectors of the Commission have been compelled to give chase to offenders and to abandon pursuit because of the uncertainty of the *locus in quo*.

The peace, comity and good will of our two great States require imperatively that this work should be done as early as possible and we wish to emphasize the importance of this situation by stating that this problem is by far the most important now confronting this Commission.

We, therefore, recommend that the Legislature take some action toward providing some means for the execution of this work as early as possible.

#### SUGGESTIONS OFFERED BY OYSTERMEN FOR LEGISLATION.

The following suggestions are recommended for legislation by the General Assembly, as made to this Commission by oystermen, to-wit:

1. Whenever the Commission shall be financially able to do so, the planting of all shells should be done on productive bottoms by the State to be subsequently used as a commonry for fishing purposes.
2. The Commission should be directed by law to equip its patrol-boats with cannon and should make it a requirement to uniform the officers and crews aboard said vessels.
3. The law should permit the fishing of seed oysters throughout the State in the month of May, under similar restrictions as now imposed by section 19 of Act 178 of 1906, and that this fishing should be permitted subject to regulations by the Commission.
4. It is a known fact that oyster shells in nearly all localities serve as the best means for cultch for oyster spawn. Any quantity of shell are sold throughout the State for divers commercial purposes, mainly for road-building and, if practical, means should be devised to cause the return of all reef oyster shells to the reefs whence they came.
5. Whenever a natural reef contains oysters whose condition will permit of their sale for consumption, the Commission should be permitted by law to restrict the fishing of such oysters for bedding-purposes, provided there should exist in the neighborhood of the locality other reefs containing oysters of poorer quality, whence seed oysters might be procured.

#### OBSERVANCE OF LAW.

There has been a respectful obedience of the provisions of the laws pertaining to the oyster industry, except in the waters of Mississippi Sound and adjacent territory. Nearly all of the offenders were aliens, or residents of Mississippi, and in nearly all cases, aggregating fifty-nine in the past two years, convictions were secured, only recently a penitentiary sentence having been inflicted on an alien fisherman convicted of dredging on the reefs in violation of law.

In addition to this, it is encouraging to note the fact that Judge N. H. Nunez of St. Bernard Parish has a few days ago decided the suit of the Oyster Commission of Louisiana vs. the

schooner "Carroll C.," declaring this vessel forfeited and ordering its sale by the Sheriff, thereby upholding the constitutionality of this feature of the oyster law, which is in our opinion vastly important in the proper enforcement thereof.

Respectfully submitted,

J. M. BREAUX,

President.

BEN MICHELL,

HORACE H. HARVEY,

CLEMENT STORY,

A. E. HOFFMAN.

## SECRETARY'S REPORT.

*To the President and Members of the Oyster Commission of Louisiana,*

Gentlemen:—I beg leave to submit this, my report, for the period of time extending from March 1, 1906, to April 1, 1908.

The financial status of the Commission has been in good condition during the period of time which this report covers. An improvement over former years is apparent from a cursory examination of the financial statistics which I am making part hereof. While the oyster industry of this State has not yet attained the mature growth which awaits it, there is every reason to believe that with rational regulations, the revenue to be derived from this source will yet fulfill all hopes that have been cherished on this score.

It is gratifying for me to report the fact that this Commission has not only been self-sustaining during the past four years, but it has helped to liquidate a handsome portion of the State's indebtedness. This is evidenced by the fact that the Commission on July 1, 1906, placed to the credit of the good roads and school funds the sum of \$10,057.51, and in the subsequent two years paid Messrs. John Dymond, Jr., and F. C. Zacharie, special counsel employed by the State in the Louisiana-Mississippi boundary suit, the sum of \$17,326.72, on a total indebtedness of \$30,000 due them. During the latter two years the sum of \$12,153.84 was spent on boats and equipment and \$146.20 for office furniture, all of which aggregates the sum of \$39,584.27. This sum represents the net earnings of the Commission from March 1, 1906 to April 1, 1908, after deducting all of the expenses incurred for the operations of the Commission.

The tax-collections have vastly improved since this feature has been placed under the control of the Commission. For the two years 1904 to 1906, the receipts of the Commission from all sources were \$79,135.57, as against a total revenue of \$115,105.02, from March 1, 1906, to April 1, 1908, making an increase during the past two years of \$35,969.95.

The following will show the rate of increase in the revenues of the Commission during the past three fiscal years, which extend from July 1 to July 1 of each succeeding year, to-wit.:

| Year.           | Revenue.    |
|-----------------|-------------|
| 1904-1905 ..... | \$39,999.22 |
| 1905-1906 ..... | 41,613.02   |
| 1906-1907 ..... | 50,807.34   |

The present fiscal year not having yet expired, statistics are not available to show the total revenue therefor. However, the sum of \$47,695.25 has been collected up to April 1, 1908, leaving three months of the fiscal year in which collections are yet to be made.

I herewith submit an itemized account showing in detail the collection of all three cents privilege taxes collected during the past two years, at the same time specifying the parishes from which the taxes have been collected. A brief summary shows the following figures in the various oyster parishes, to-wit.:

| Parishes          | Amounts.    | Barrels.  |
|-------------------|-------------|-----------|
| Orleans .....     | \$ 1,477.53 | 49,251    |
| St. Bernard ..... | 21,101.10   | 703,370   |
| Plaquemines ..... | 15,936.70   | 531,223   |
| St. Mary .....    | 3,704.34    | 123,478   |
| Terrebonne .....  | 4,602.91    | 153,430   |
| Lafourche .....   | 538.68      | 17,856    |
| Iberia .....      | 4,522.24    | 150,741   |
| Jefferson .....   | 88.37       | 2,946     |
| <hr/>             |             |           |
| Total.....        | \$50,968.88 | 1,695.629 |

(For further itemized data see Appendix, 1, 2, 3.)

It is gratifying to mention that six new oyster canneries have located in Louisiana and, with five already established, have taken out licenses as follows: G. W. Dunbar's Sons, Empire, La.; Lopez & Dukate Inc., Morgan City, La.; Lopez & Dukate, Inc., Westwego, La.; Pelican Lake Oyster & Packing Company Ltd., Houma, La.; McIlhenny Company, Avery Island, La.; Sancho Packing Company, New Orleans, La.

There were 1460 vessels licensed to fish during the period of time covered by this report. These licenses are based on the legal requirement of 50 cents per ton, or any fraction of a ton, and are imposed on every vessel engaged in the fishing of oysters. (See vessels licensed for fishing and freighting oysters, by Oyster Commission of La. pages 79 to 114). In addition to this license, all vessels conducting the business of purchasing oysters for Re-sale, are required to take out a licenses, based also on the tonnage of the vessel, these licenses ranging from \$10.00 to \$20.00 (See vessels licensed for buying for re-sale by Oyster Commission of La. page 116).

Next in importance to the revenue derived from the licenses imposed on canners is that derived from dealers who buy oysters for resale and shipment, either raw, in shells, or packed.

There were issued thirty-nine (39) licenses of this character, which range from \$10.00 to \$25.00, being based on the number of shuckers in the establishment thus licensed, and where no shuckers are employed the license is based on the number of barrels handled. (See firms licensed for buying oysters for Re-sale and Shipment, by Oyster Commission of La. pages 117, 118.).

Forty-three scraper licenses were issued during the past two years, these ranging from \$25.00 to \$50.00. (See vessels licensed to fish oysters with scrapers by Oyster Commission of La. pages 115, 116).

I also submit as part of my report a list showing the aggregate of leaseholds now in force, together with the name of each lessee and the acreage contained in his lease. (See list of bedding ground leases pages 19 to 78).

I wish to take this occasion to express my appreciation of all co-operative efforts shown my department at all times by the personnel and other officers of this Commission.

Respectfully submitted,

W. M. JUNGBLUT.

Secretary.

## PROGRESS OF LOUISIANA OYSTER EXPERIMENTS.

By H. F. Moore.

Experiments in oyster culture and investigations in reference to the supply of oyster food in the waters of Louisiana were undertaken at the instance of the Oyster Commission of that State in April, 1906, and have been continued to the present time.

For the experimental work in oyster culture, five localities were originally selected, namely: Three-mile Bayou and False-mouth Bay in St. Bernard Parish, Bayou St. Denis and Tambour Bay in Jefferson Parish and Seabreeze in Terrebonne Parish. Work has since been abandoned at Seabreeze and undertaken at Pelican Lake in the same parish.

The experiments have been directed towards a practical demonstration of the advantages of planting shells and other cultch, and thus saving to the oyster industry some of the untold billions of infant oysters which would otherwise fail of attachment and die. The system of planting seed oysters derived from the natural bars results in an improvement in the quality of the oysters and renders a large proportion of the natural growth fit for market, but it does not materially increase the number of oysters actually produced. The history of all states in which the business of oyster growing has been largely developed, indicates that the demand for seed soon outgrows the natural production, and that the bars from which it is derived soon become more or less depleted. For a State to take foremost rank in the oyster industry, it is absolutely essential that a considerable number of growers must produce seed, either for their own use or for sale to others who have grounds favorably situated for growing and fattening. A reliance upon the productiveness of the natural beds sooner or later results in embarrassment and eventual disaster.

The production of seed by planting shells and other suitable materials is practiced to a very limited extent in Louisiana, mainly in the delta of the Mississippi, but the results so far attained

in the experiments of the Bureau of Fisheries, show great possibilities of the method applied in other localities. The results, briefly, are as follows:

ST. BERNARD PARISH.—In Three-mile Bayou, shells planted in May, 1906, within nineteen months yielded a dense growth of oysters averaging  $3\frac{1}{2}$  inches, many of them attaining 4 inches in length, and subsequent plantings as late as July in both 1906 and 1907 yielded equivalent results, both as to the density of the set and the rate of growth. The set on shells in this locality is so abundant that the oysters tend to become crowded, but it was shown that by culling them at the end of the first year, they will develop into oysters of good shape and quality, and the indication is that they will require additional culling when ready for the market.

At False-mouth Bay, where there are no natural beds, the results of the planting experiments, were as good or better than those in Three-mile Bayou. The growth is as rapid and the shape superior. There was a good set of spat in both 1906 and 1907, and a set can probably be obtained with certainty. This bay contains one of the largest areas of good hard bottom to be found on the Louisiana coast, and the present indications confirm the favorable opinion that I formed of it in 1898.\*

JEFFERSON PARISH.—In Tambour Bay, owing to the absence of known oyster beds in the vicinity, a plant of fifty barrels of rough natural oysters was made, upon my request, by the Louisiana Oyster Commission in January, 1906, in order to furnish spawn for subsequent experiments. Shells were planted in April, 1906, and subsequently by the Bureau of Fisheries, and a good set was obtained, but in every case the young oysters were killed before they reached a length of one inch, while the large brood oysters survived and grew. The natives of the region attributed the mortality to some peculiarity of the water, but the presence of a large number of snails (*Purpura*) excited the suspicion of the experimentors and subsequent investigations, devised for the purpose, have shown the suspicion to be well founded. The destructiveness of this "borer" will prevent the

\*Explained in "Report on the Oyster-Beds in Louisiana," United States Commission of Fish and Fisheries, Pamphlet 402.

success of spat culture in this locality, but seed two inches or more in length can be planted with impunity and perhaps with success.

At Bayou St. Denis the plants have been uniformly successful and good, fat, well-shaped marketable oysters, averaging  $3\frac{1}{2}$  inches long, having been raised in twenty months from the time of planting the shells. Oysters grown on clam shells, while of fine shape and excellent in quality, are somewhat smaller than those grown on oyster shells.

The experiments in Barataria Bay were undertaken with the purpose of demonstrating that a barren region could be made productive and they have already resulted in inducing the leasing of about 300 acres of bottom in the immediate vicinity of the experimental plant, yielding to the State during the present year \$500.00. The ultimate value of the work to the State and her citizens should be large.

TERREBONNE PARISH.—The work at Seabreeze was undertaken with the object of determining what results could be attained with bottom much too soft for ordinary methods of planting. One season's work indicated that the conditions were too unfavorable and operations were transferred to Pelican Lake where a variety of consistencies of bottom could be found.

At Pelican Lake work was begun in the spring of 1907, and a number of plants were made on bottoms varying from hard to very soft. A good set of spat has been secured in most cases and the indications are that it will be demonstrated that shells can be successfully planted on bottoms usually considered too soft. The experiments at this place will be valuable elsewhere, as the consistency of the bottom is determined with a mechanical device which gives a definite record.

The culture work on the whole has already demonstrated its practical value, and further commercial developments may be confidently expected. In all places where experiments have been made a good set may be obtained every year.

The oyster food investigations present a more difficult problem. The records have not been sufficiently worked up and di-

gested to warrant definite statements as to results, but it is hoped that when the work is completed some light will be thrown on the well-known irregularities in the fattening properties of Louisiana waters, especially upon the disputed effects of river water from crevasses and fluctuations in the fresh water drainage.

Both lines of work will be continued and probably brought to a conclusion in the fall of 1908.

## PLAQUEMINES PARISH.

*Oyster bedding ground leases issued by Police Jury of Parish of Plaquemines, prior to organization of the Oyster Commission of Louisiana.*

| Lease<br>No. | Name.            | Address.    | Acreage. | Location.         |
|--------------|------------------|-------------|----------|-------------------|
| 1            | A. Negodich      | Empire      | .60      | Bayou Cook        |
| 2            | B. L. Jurisich   | New Orleans | 1.85     | Bayou Cook        |
| 3            | B. L. Jurisich   | New Orleans | 6.00     | Bastian Bay       |
| 4            | Geo. Parun       | Olga        | 4.45     | *Jack Bay         |
| 5            | Ante Dimak       | Empire      | .80      | Bastion Bay       |
| 6            | Ante Dimak       | Empire      | 3.00     | Bastion Bay       |
| 8            | Ant. Rudolph     | Empire      | 10.00    | Bay Adam          |
| 9            | V. L. Jurisich   | Empire      | 2.50     | Bastian Bay       |
| 10           | V. L. Jurisich   | Empire      | 3.02     | Bastian Bay       |
| 11           | F. M. Stockflett | Empire      | 1.90     | Half Moon Bay     |
| 12           | F. M. Stockflett | Empire      | 1.00     | Bastian Bay       |
| 13           | F. M. Stockflett | Empire      | .50      | Bastion Bay       |
| 14           | F. M. Stockflett | Empire      | .75      | Bastian Bay       |
