APPROPRIATION TITLE: Construction, General - Local Protection Projects (Flood Control)

## PROJECT: Lake Pontchartrain and Vicinity, Louisiana (Hurricane Protection) (Continuing)

LOCATION: The project is located in St. Charles, Jefferson, Orleans, St. Bernard and St. Tammany Parishes in southeast Louisians in the general vicinity of New Orleans adjacent to Lake Pontchartrain. The project area comprises the lowland and water areas from the Mississippi River and west and north shores of Lake Borgne to the Pleistocence escarpment to the north and west.

AUTHORIZATION: 1965 Flood Control Ac	t <sup>r</sup>		BENEFIT-COST RATIO:	12.4 to 1

Includes \$3,816,000 capitalized cost of OMM for Rigolets Lock. In addition, local interests, through the combined efforts of the State of Louisiana, local levee and drainage districts, and parish police juries have spent, through the years, an estimated \$25,000,000 to effectuate and maintain the hurri-cane protection systems existing prior to project authorization. Includes \$2,790,000 placed in budgetary reserve. This amount to be allocated in FY 1971. 2/

JUSTIFICATION: The lowlands in the Lake Pontchartrain tidal basin are subject to tidal overflow. The Greater New Orleans Metropolitan area which lies in this basin will continue its rapid economic development in the near future even though severe damages have resulted from several hurricanes in the recent past. Hurricane damages result from surges entering Lake Pontchartrain from Lake Borgne through natural tidal passes at Rigolets and Chef Menteur Pass and through improved channels of the Mississippi River-Gulf Outlet and Inner Harbor Navigation Canal. The surges are intensified by local wind effects, and the combination of waves and surges causes overtopping of the protective works along the shores of the lake. The eastern portion of the area is also subject to flooding by surges and waves that move directly from Lake Borgne and

overtop the existing inadequate protective system seaward of the developed land areas. As a result, residences and indus-trial and commercial establishments suffer damage, business activities are disrupted, lives endangered, and hazards to health created. Hurricanes much more severe than any of record are possible. In the event of the occurrence of such a severe hurricane, catastrophic property damage and loss of human life would be experienced. Local interests have requested protection against these threats to life and property. Another and related problem exists in the area. The Mississippi River-Gulf Outlet provides a deep, direct route for the inflow of saline currents from the Gulf of Mexico to the area along its channel and to Lake Pontchartrain, with resultant adverse effect on fishery resources in the area. The Culf outlet channel also will produce high velocity currents in the Inner Harbor Canal, creating a hazard to navigation and causing serious scour and damage, particularly in constricted areas at bridge crossings. These adverse effects will be greatly alleviated by construction of the lock for navigation and salinity control at the lake end of the Inner Harbor Navigation Canal (IHNC) at Seabrook.

The average annual benefits, all flood control, are estimated at \$91,446,800.

FISCAL YEAR 1971: The requested amount of \$8,250,000 will be applied to:

\_ ...

Initiate:	
Ney Orleans East Unit	
Wew Orleans East Back Levee (Sta. 664 to 695 & 722 to 763) 1st lift levee	\$200,000

Chalmette Unit Chalmette (IHNC to Bayou Bienvenue, Sta. 65 to 355) 1st lift levee	\$537,000
Engineering and Design Supervision and Administration	1,400,000 963,000
Total	\$8,250,000

e funds requested for Fiscal Year 1971 are required to continue construction at an orderly and economical rate to meet the scheduled completion date and to assure maximum incremental benefits from the funds expended.

MON-FEDERAL COSTS: Local interests are to bear 30% of the first cost to consist of the fair market value of all lands, easements, and rights-of-way, including borrow and spoil disposal areas necessary for construction of the hurricane fea-tures, and to accomplish all necessary alterations and relocations to roads, railroads, pipelines, cables, wharves, drain-age structures, and other facilities made necessary by the construction works. They are required to share in only 1/2 the cost of Seabrook Lock; the other half being constructed for navigation purposes at Federal expense. In addition, local interests are required to contribute the capitalized cost of operation and maintenance for Rigolets Lock. The current estimate of project costs to be borne by local interests follows:

Lands and Damages Relocations	<b>\$19,922,000</b> 3,691,000
Cash Contributions: Based on 30% of total project cost less Seabrook Lock Based on 15/85 ratio for Seabrook Lock Capitalization of 0&M for Rigolets Lock	28,305,000 1,341,000 3,816,000
Total	\$57,075,000

Continue:

Local interests are required to operate and maintain all features of the project works, excluding the Rigolets Navigation Lock and channel and modified dual-purpose Seabrook Lock. The annual cost to local interests for maintenance and opera-tion is estimated at \$299,000 and replacements \$137,300, a total of \$436,300.

In addition, local interests, through the combined efforts of the State of Louisiana, local levee and drainage districts, and parish police juries have spent an estimated \$25,000,000 between 1930-1963, based on the best cost records available, to effectuate and maintain the hurricane protection system existing prior to project authorization. Available costs of record are tabulated below:

Combination of State of Louisiana, Lake Borgne Levee District and Chalmette	· · · ·
Back Levee District on the Chalmette Back Levee Protection Systems	\$ 4,410,000
Orleans Levee District Board	12,010,000
Port of New Orleans (Levees along Industrial Canal)	924,000
Pontchartrain Levee District	5,022,000 1/
Fourth Drainage District of Jefferson Parish	3,000,000 2/
Total.	\$25,366,000

[]/ Cash contribution, furnishing rights-of-way, relocations and maintenance of FCMR&T Lake Pontchartrain, Louisiana project, which protects East Jefferson Parish from Lake Pontchartrain imundations.
[2]/ For interior drainage improvements required by the FCMR&T Lake Pontchartrain, Louisiana, project.

A very severe hurricane, "Betsy", occurred in the project area in September 1965 just prior to authorization of the project in October 1965. Considerable damage was done to many of the existing levees and local interests immediately instituted an accelerated rehabilitation program with the view of restoring and strengthening existing protection prior to succeeding hurricane seasons. Some of this work will conform to the project design criteria and alignment and will be accepted by the United States as work-in-kind in lieu of cash contribution, but some portions of work will not meet project requirements. The expenditures on the portion that will not meet project requirements will be, in effect, an additional amount spent by local interests prior to authorization. This amount could range upward to a million dollars or more or more.

Hurricane "Camille" occurred in the project area in August 1969 and flooded areas along the Inner Harbor Navigation Canal.

STATUS OF LOCAL COOPERATION: The Governor of Louisiana has appointed the State Department of Public Works to act as co-STATUS OF LOCAL COOPERATION: The Governor of Louisiana has appointed the State Department of Public Works to act as co-ordinator in resolving all questions that may arise and to expedite the furnishing of assurances. The Corps of Engineers is continually engaged with the State Department of Public Works in clarifying requirements of local cooperation, as neces-sary. Formal request for assurances for the Barrier Plan were requested on 27 July 1966 and furnished by the Board of Commissioners, Orleans Levee District, on 28 July 1966. Formal assurances for the Chalmette Area Plan and its modification were requested respectively on 8 February 1966 and 6 June 1967 and were furnished jointly by the St. Bernard Police Jury and the Board of Commissioners, Lake Borgne Levee District on 16 August 1966 and 6 July 1967. This completes all the assurances necessary for the construction of Lake Pontchartrain and Vicinity, Hurricane Protection.

COMPARISON OF FEDERAL COST ESTIMATES: The current Federal cost estimate of \$124,925,000 is an increase of \$11,363,000 over the latest estimate (\$113,562,000) submitted to Congress. This change includes increases of \$10,582,000 for higher price levels and \$781,000 for Engineering and Design based on reanalysis of requirements.
